ANGLO SWISS ADDS GEMSTONE EXPERIENCE TO ITS BOARD

Anglo Swiss Resources Inc. (TSX-Venture-ASW, OTC BB ASWRF, Berlin - AMO) is pleased to announce that Mr. Glen C. MacDonald, P. Geo. will join the Company's Board of Directors, effective immediately.

Mr. MacDonald is a professional geologist with over 30 years of exploration and mine development experience in the mineral industry. He has designed and managed exploration campaigns worldwide for both metals and gemstones, and has concentrated primarily on Canadian diamond and gemstone exploration for the past 10 years. Mr. MacDonald will assume technical responsibility for development of the Company's gemstone exploration programs.

Mr. MacDonald has served on the Board of Directors for numerous public companies with management roles in technical, project management and financing. Anglo Swiss is pleased to welcome Glen to the Company and believes that his experience and knowledge in the emerging diamond and colored gemstone industry in Canada will be integral to the advancement of the Blu Starr Gemstone project and the newly acquired McAllister & Pipe Group of claims. Anglo Swiss has been developing its gemstone property in southeastern British Columbia since 1995.

Because the geology of B.C. is very complex, it includes geological settings favourable for hosting a wide variety of gemstones. Large areas of B.C. are underlain by high-grade metamorphic rocks similar to those hosting gem deposits in East Africa and those believed to be the source of the gems found in placer deposits in Sri Lanka. B.S. Wilson (1997) Gemstone Occurrences in British Columbia, Canadian Gemmologist, 18(3) p. 74-86.

Anglo Swiss is targeting southeastern British Columbia for its gem potential as its current discoveries of gemstone (sapphire, iolite, garnet) and a large flake (carbon) graphite showing confirm that this area has been long over looked for precious gem deposits. The recent discoveries of emerald, ruby, sapphire, opal and the emergence of the diamond industry in Canada have greatly advanced the potential of Canadian gemstone exploration projects.

Anglo Swiss acquired an additional 28 mineral claim units in the Nelson Mining District in July 2004 to add to its current gem property in the Slocan/Nelson Mining Districts known as the Blu Starr Gemstone property. The McAllister and Pipe Groups are contiguous and are located to the southeast of the 15,000 acre Blu Starr property. Initial exploration will commence shortly on both properties under Mr. MacDonald's guidance.

The Blu Starr Gemstone property is located in the Slocan Valley, South-eastern British Columbia. The property consists of 6200 hectares (15,312 acres) of mineral tenure rights plus an additional 650 hectares (1606 acres) of placer mineral rights contained in 13 placer claims. Exploration to-date on less than 10% of the claim group has yielded dozens of gem outcrops at surface. The Sapphire Hill Zones 1, 2 and 3 from east to west, occur along a strike length of almost 2 kilometres. The property hosts numerous occurrences of sapphire (15), iolite or gem-cordierite (11), gemstone quality garnet (2), as well as a flake graphite deposit; other minerals include aquamarine (beryl), tourmaline,

titanite, moonstone and several varieties of quartz crystals.

Previous exploration has confirmed that the geological setting and potential gem grades (carats per tonne) of the numerous showings are extremely promising. Proposed 2004 work programs have been approved on the Blu Starr property.
