Exhibit 1.5

BP p.l.c. - BP, Verenium in biofuels research deal  
BP p.l.c. - 6 August 2008

**BP  
and Verenium  
announce**

**significant partnership  
to accelerate the commercialization of cellulosic ethanol**

-  
*Collaboration assembles core capabilities across*

*biofuels value chain to  
accelerate  
commercial-scale  
cellulosic  
ethanol production  
using non-food feedstocks*

*- Initial phase includes \$90 million in total funding  
by BP*

*to Ver  
en  
ium  
over 18 months*

**August  
6**

, 2008

- BP  
and Verenium Corporation  
(Nasdaq: VRNM),  
today announced the creation of a strategic  
partnership  
to accelerate the development and commercialization of cellulosic ethanol

The  
partnership combines

a broad  
technology  
platform  
and operational capabilities  
in an effort to  
advance the  
development of a portfolio of low-cost, environmentally-sound cellulosic ethanol production facilities in the  
United States  
, and potentially throughout the world.  
Under the initial phase of the strategic alliance,  
Verenium is to receive \$90 million in total funding from BP over the next 18 months for rights to current and  
future technology held within the partnership.

"

We are very excited and proud to be partnering with

BP, a world leader in both the traditional and alternative energy

industries that shares our commitment and vision to rapidly evolve next-generation ethanol into a  
commercial-scale solution for our energy needs," said Carlos A. Riva, President and Chief Executive  
Officer at Verenium.

"In addition to BP's world-class capabilities in traditional energy production, logistics and distribution, their  
commitment to accelerate the development of the global biofuels market was a significant factor in our  
decision to partner with BP. In addition, both organizations are aligned on the significant market opportunity  
and operational imperatives for achieving rapid commercial-scale success."

"

BP is very pleased to be entering this important relationship with Verenium

.

We

believe energy crops like sugar cane, miscanthus and energy cane are the best  
feedstocks

to deliver economic, sustainable and scaleable biofuels to the world. This deal puts us at the front of the  
cellulosic biofuels game

;

"

said  
Sue Ellerbusch  
, p  
resident  
of  
BP  
B  
iofuels  
North America.

"

In partnering with Verenium, w  
e now have the most advanced technology for transforming these energy grasses to biofuels,  
increasing  
our

ability

to  
invest earlier  
in the  
US

to meet the requirements for cellulosic ethanol laid out in the recent energy bill. We also  
have the possibility

of  
enhanc  
ing

the  
productivity  
of  
our Brazilian assets. Verenium ha  
s  
already demonstrated the technology

,  
mak  
ing

this real and an appropriate fit with our commitment to bring more sustainable biofuels to the market more  
quickly."

The initial phase of the strategic alliance utilizes Verenium's advanced technology for cellulosic ethanol  
production as the platform for a joint development effort between BP and Verenium. The companies have  
formed a Special Purpose Entity (SPE) that is equally owned by BP and Verenium and will license existing  
intellectual property from each company and own jointly-developed intellectual property in the field of  
cellulosic ethanol production. All intellectual property owned prior to the formation of the SPE will be  
retained by each respective company.

Further, the SPE will serve as the licensing entity to enable all cellulosic ethanol production projects.

The financial terms of this initial phase of the strategic alliance include:

- \$45 million, payable in three instalments over the next twelve months, for broad access to Verenium's cellulosic ethanol technology platform, production facilities, and employee scientific knowledge and expertise. At closing, Verenium will receive the first \$24.5M of this amount.
- \$2.5 million per month to co-fund Verenium's various scientific and technical initiatives within the cellulosic ethanol field. The companies' joint efforts in the field will be directed by a Joint Development Agreement in initial term of which is 18 months.

Beyond the initial phase of this alliance, the companies expect to negotiate a second phase of the relationship focused on the development of a Joint Venture (JV)

to accelerate the commercial deployment of the technologies from the SPE into commercial-scale cellulosic ethanol production facilities. While the primary and initial focus of the JV

will be on facilities jointly-owned by BP and Verenium in the United States, the SPE technologies may

also be licensable to third-party commercial projects. It is the companies' intention to negotiate and finalize this second phase of the strategic alliance, including incremental financial terms for co-funding the JV

Lazard

in connection with the  
transaction.

**C**  
**onference Call**

Verenium and  
BP will host a joint conference call with live webcast at  
10  
:00  
a.m. EDT.

The call may be accessed by dialing  
866-825-1692  
(domestic) or  
617-213-8059  
(international) five minutes prior to start time and providing the passcode  
71026740.

A link to the live webcast may be accessed by visiting Verenium's website at  
[www.verenium.com](http://www.verenium.com)  
or the BP biofuels website at [www.bp.com/biofuels](http://www.bp.com/biofuels).

A replay of the call will be archived on both Companies' websites for 30 days.

**Cellulosic Ethanol**

Cellulosic ethanol is a renewable fuel source produced from biomass-derived products such as sugarcane waste (bagasse), switchgrass, rice straw and wood chips. Cellulose, a long-chain polysaccharide found in nearly all plant life, is the most abundant molecule on earth.

Cellulosic ethanol uses advanced biological science to reduce the cost of ethanol production and enable access to a wide variety of biomass. Unlike traditional ethanol manufactured from corn cellulosic ethanol production utilizes non-food, plant biomass as its feedstock source. The biomass is first broken down into fermentable sugars using acid or enzymatic hydrolysis and industrial enzymes, after which the sugars are fermented into ethanol using various fermentation organisms. Ethanol produced from cellulosic biomass is believed to have many benefits over first-generation ethanol including, the use of non-food feedstock, substantially greater yield than grain ethanol per acre of feedstock, minimal exposure to volatile commodity price risks across the production process and a more favorable environmental impact.

It also offers the potential to deliver significant greenhouse gas emission reductions of 80-90% compared to grain ethanol at GHG emission reductions of 0-70%.

**The**

**Energy Bill**

The production of cellulosic ethanol in the  
United States

is supported by the Energy Independence and Security Act of 2007, which mandates  
21 billion gallons of

advanced biofuel production

by 2022,  
of which 16 billion gallons must come from cellulosic ethanol

**Verenium**

Verenium Corporation is a leader in the development and commercialization of next-generation cellulosic ethanol, an environmentally-friendly and renewable transportation fuel, as well as high-performance specialty enzymes for applications within the alternative fuels, specialty industrial processes, and animal nutrition and health markets. The Company possesses integrated, end-to-end capabilities in pre-treatment, novel enzyme development, fermentation, engineering, and project development and is moving rapidly to commercialize its proprietary technology for the production of ethanol from a wide array of cellulosic feedstocks, including dedicated energy crops, sugarcane bagasse, agricultural waste, and wood products.

In addition to the vast potential for biofuels, a multitude of large-scale industrial opportunities exist for the Company relating to products derived from the production of low-cost, biomass-derived sugars.

Verenium's Specialty Enzyme business harnesses the power of enzymes to create a broad range of specialty products to meet high-value commercial needs.

Verenium's world class R&D organization is renowned for its capabilities in the rapid screening, identification, and expression of enzymes-proteins that act as the catalysts of biochemical reactions.

For more information, visit <http://www.verenium.com>.

**BP**

BP is one of the world's largest energy companies, providing its customers with fuel for transportation, energy for heat and light, retail services and petrochemicals products for everyday items. It is the largest oil and gas producer in the U.S.

and one of the largest refiners. BP also has a global network of around 25,000 service stations.

BP is a leading player in the global biofuels market. In the US

, BP blended and distributed 763 million US

gallons of ethanol and about 1 million US

gallons of biodiesel during

2007. In Europe

, BP sold 344 million liters of ethanol and 847 million liters of biodiesel during

2007. BP's sales of biofuels in 2007 accounted for about 10% of the global biofuels market

Exhibit 1.6

BP p.l.c. - Transaction in Own Shares  
BP p.l.c. - 7 August 2008

BP p.l.c. announces that on 6 August 2008, it purchased for cancellation 1,641,663 ordinary shares at prices between 507.75 pence and 520.00 pence per share.

BP p.l.c. also announces that on 6 August 2008 it transferred to participants in its employee share schemes 2,801 ordinary shares at a price of 500.00 pence. These shares were previously held as treasury shares.

Following the above transactions BP p.l.c. holds 1,902,866,297 ordinary shares in Treasury, and has 18,768,672,743 ordinary shares in issue (excluding Treasury shares).

Enquiries: Fergus MacLeod, BP p.l.c. Tel: 020 7496 4632

Exhibit 1.7

BP p.l.c. - Transaction in Own Shares  
BP p.l.c. - 8 August 2008

BP p.l.c. announces that on 7 August 2008, it purchased for cancellation 611,287 ordinary shares at prices between 524.75 pence and 530.00 pence per share.

Following the above transaction BP p.l.c. holds 1,902,866,297 ordinary shares in Treasury, and has 18,768,095,386 ordinary shares in issue (excluding Treasury shares).

Enquiries: Fergus MacLeod, BP p.l.c. Tel: 020 7496 4632

Exhibit 1.8

BP p.l.c. - Transaction in Own Shares  
BP p.l.c. - 11 August 2008

BP p.l.c. announces that on 8 August 2008, it purchased for cancellation 1,490,000 ordinary shares at prices between 515.75 pence and 531.00 pence per share.

Following the above transaction BP p.l.c. holds 1,902,866,297 ordinary shares in Treasury, and has 18,766,618,436 ordinary shares in issue (excluding Treasury shares).

Enquiries: Fergus MacLeod, BP p.l.c. Tel: 020 7496 4632

Exhibit 1.9

BP p.l.c. - Director/PDMR Shareholding  
BP p.l.c. - 11 August 2008

BP p.l.c. was advised on 11 August 2008 by Computershare Plan Managers that on 11 August 2008 the following Directors of BP p.l.c. and other senior executives (persons discharging managerial responsibilities) acquired in London the number of BP Ordinary Shares (ISIN number GB0007980591) shown opposite their names below at £5.195 per share through participation in the BP ShareMatch UK Plan:-

**Directors**

Dr A.B. Hayward 64 shares  
Mr I.C. Conn 64 shares

**Other Persons Discharging Managerial Responsibilities**

Mr R Bondy 64 shares  
Mrs V. Cox 64 shares  
Mr J. Mogford 64 shares  
Mr S. Westwell 64 shares

This notice is given in fulfillment of the obligation under DTR 3.1.4(1)(a)R.

Exhibit 2.0

BP p.l.c. - Transaction in Own Shares  
BP p.l.c. - 1  
2  
August 2008

BP p.l.c. announces that on  
11  
August 2008, it purchased for cancellation 1,  
970  
,000 ordinary shares at prices between 51  
7  
.75 pence and 5  
29  
.
