Registrant's telephone number, including area code: (610) 768-3300

Securities registered pursuant to Section 12(b) of the Act:

Title of each Class	Name of each exchange on which registered
Class B Common Stock, \$.01 par value	New York Stock Exchange

Securities registered pursuant to Section 12(g) of the Act:

Class D Common Stock, \$.01 par value

(Title of each Class)

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. **Yes** **No**

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Exchange Act. **Yes** **No**

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days. **Yes** **No**

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files). **Yes** **No**

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K.

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company. See the definitions of "large accelerated filer," "accelerated filer" and "smaller reporting company" in Rule 12b-2 of the Exchange Act (check one):

Large accelerated filer **Accelerated filer** **Non-accelerated filer** **Smaller reporting company**
Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act). **Yes** **No**

Edgar Filing: UNIVERSAL HEALTH SERVICES INC - Form 10-K

The aggregate market value of voting stock held by non-affiliates at June 30, 2011 was \$4.61 billion. (For the purpose of this calculation, it was assumed that Class A, Class C, and Class D Common Stock, which are not traded but are convertible share-for-share into Class B Common Stock, have the same market value as Class B Common Stock. Also, for purposes of this calculation only, all directors, officers subject to Section 16(b) of the Securities Exchange Act of 1934, and 10% stockholders are deemed to be affiliates.)

The number of shares of the registrant's Class A Common Stock, \$.01 par value, Class B Common Stock, \$.01 par value, Class C Common Stock, \$.01 par value, and Class D Common Stock, \$.01 par value, outstanding as of January 31, 2012, were 6,625,708, 89,408,941, 664,000 and 33,084, respectively.

DOCUMENTS INCORPORATED BY REFERENCE:

Portions of the registrant's definitive proxy statement for our 2012 Annual Meeting of Stockholders, which will be filed with the Securities and Exchange Commission within 120 days after December 31, 2011 (incorporated by reference under Part III).

This Annual Report on Form 10-K is for the year ended December 31, 2011. This Annual Report modifies and supersedes documents filed prior to this Annual Report. Information that we file with the Securities and Exchange Commission (the "SEC") in the future will automatically update and supersede information contained in this Annual Report.

In this Annual Report, we, us, our and the Company refer to Universal Health Services, Inc. and its subsidiaries. UHS is a registered trademark of UHS of Delaware, Inc., the management company for, and a wholly-owned subsidiary of Universal Health Services, Inc. Universal Health Services, Inc. is a holding company and operates through its subsidiaries including its management company, UHS of Delaware, Inc. All healthcare and management operations are conducted by subsidiaries of Universal Health Services, Inc. To the extent any reference to "UHS" or "UHS facilities" in this report including letters, narratives or other forms contained herein relates to our healthcare or management operations it is referring to Universal Health Services, Inc.'s subsidiaries including UHS of Delaware, Inc. Further, the terms we, us, our or the Company in such context similarly refer to the operations of Universal Health Services Inc.'s subsidiaries including UHS of Delaware, Inc. Any reference to employees or employment contained herein refers to employment with or employees of the subsidiaries of Universal Health Services, Inc. including UHS of Delaware, Inc.

Table of Contents

PART I

ITEM 1. Business

Our principal business is owning and operating, through our subsidiaries, acute care hospitals, behavioral health centers, surgical hospitals, ambulatory surgery centers and radiation oncology centers. As of February 24, 2012, we owned and/or operated 25 acute care hospitals and 198 behavioral health centers located in 36 states, Washington, D.C., Puerto Rico and the U.S. Virgin Islands. As part of our ambulatory treatment centers division, we manage and/or own outright or in partnerships with physicians, 6 surgical hospitals and surgery and radiation oncology centers located in 4 states and Puerto Rico.

In November, 2010, we acquired Psychiatric Solutions, Inc. (PSI). PSI was formerly the largest operator of freestanding inpatient behavioral health care facilities operating a total of 105 inpatient and outpatient facilities in 32 states, Puerto Rico, and the U.S. Virgin Islands.

Net revenues from our acute care hospitals, surgical hospitals, surgery centers and radiation oncology centers accounted for 55% of our consolidated net revenues in 2011, 70% in 2010 and 74% in 2009. Net revenues from our behavioral health care facilities accounted for 45% of our consolidated net revenues during 2011, 30% during 2010 and 25% during 2009. Approximately 1% of our consolidated net revenues in 2009 were recorded in connection with two construction management contracts pursuant to the terms of which we built newly constructed acute care hospitals for an unrelated third party.

Services provided by our hospitals include general and specialty surgery, internal medicine, obstetrics, emergency room care, radiology, oncology, diagnostic care, coronary care, pediatric services, pharmacy services and/or behavioral health services. We provide capital resources as well as a variety of management services to our facilities, including central purchasing, information services, finance and control systems, facilities planning, physician recruitment services, administrative personnel management, marketing and public relations.

We are a Delaware corporation that was organized in 1979. Our principal executive offices are located at Universal Corporate Center, 367 South Gulph Road, P.O. Box 61558, King of Prussia, PA 19406. Our telephone number is (610) 768-3300.

Available Information

Our website is located at <http://www.uhsinc.com>. Copies of our annual, quarterly and current reports that we file with the SEC, and any amendments to those reports, are available free of charge on our website. The information posted on our website is not incorporated into this Annual Report. Our Board of Directors' committee charters (Audit Committee, Compensation Committee and Nominating & Governance Committee), Code of Business Conduct and Corporate Standards applicable to all employees, Code of Ethics for Senior Financial Officers, Corporate Governance Guidelines and our Healthcare Code of Conduct, Corporate Compliance Manual and Compliance Policies and Procedures are available free of charge on our website. Copies of such reports and charters are available in print to any stockholder who makes a request. Such requests should be made to our Secretary at our King of Prussia, PA corporate headquarters. We intend to satisfy the disclosure requirement under Item 5.05 of Form 8-K relating to amendments to or waivers of any provision of our Code of Ethics for Senior Financial Officers by promptly posting this information on our website.

In accordance with Section 303A.12(a) of the New York Stock Exchange Listed Company Manual, we submitted our CEO's certification to the New York Stock Exchange in 2011. Additionally, contained in Exhibits 31.1 and 31.2 of this Annual Report on Form 10-K, are our CEO's and CFO's certifications regarding the quality of our public disclosures under Section 302 of the Sarbanes-Oxley Act of 2002.

Table of Contents

Our Mission

Our mission and objective is to provide superior healthcare services that patients recommend to families and friends, physicians prefer for their patients, purchasers select for their clients, employees are proud of, and investors seek for long-term results. To achieve this, we have a commitment to:

service excellence

continuous improvement in measurable ways

employee development

ethical and fair treatment

teamwork

compassion

innovation in service delivery

Business Strategy

We believe community-based hospitals will remain the focal point of the healthcare delivery network and we are committed to a philosophy of self-determination for both the company and our hospitals.

Acquisition of Additional Hospitals. We selectively seek opportunities to expand our base of operations by acquiring, constructing or leasing additional hospital facilities. We are committed to a program of rational growth around our core businesses, while retaining the missions of the hospitals we manage and the communities we serve. Such expansion may provide us with access to new markets and new healthcare delivery capabilities. We also continue to examine our facilities and consider divestiture of those facilities that we believe do not have the potential to contribute to our growth or operating strategy.

Improvement of Operations of Existing Hospitals and Services. We also seek to increase the operating revenues and profitability of owned hospitals by the introduction of new services, improvement of existing services, physician recruitment and the application of financial and operational controls.

We are involved in continual development activities for the benefit of our existing facilities. Applications to state health planning agencies to add new services in existing hospitals are currently on file in states which require certificates of need, or CONs. Although we expect that some of these applications will result in the addition of new facilities or services to our operations, no assurances can be made for ultimate success by us in these efforts.

Quality and Efficiency of Services. Pressures to contain healthcare costs and technological developments allowing more procedures to be performed on an outpatient basis have led payors to demand a shift to ambulatory or outpatient care wherever possible. We are responding to this trend by emphasizing the expansion of outpatient services. In addition, in response to cost containment pressures, we continue to implement programs at our facilities designed to improve financial performance and efficiency while continuing to provide quality care, including more efficient use of professional and paraprofessional staff, monitoring and adjusting staffing levels and equipment usage, improving patient management and reporting procedures and implementing more efficient billing and collection procedures. In addition, we will continue to emphasize innovation in our response to the rapid changes in regulatory trends and market conditions while fulfilling our commitment to

Edgar Filing: UNIVERSAL HEALTH SERVICES INC - Form 10-K

patients, physicians, employees, communities and our stockholders.

In addition, our aggressive recruiting of highly qualified physicians and developing provider networks help to establish our facilities as an important source of quality healthcare in their respective communities.

Table of Contents

Acquisition and Divestiture Activity:

Acquisitions:

During 2011, we paid approximately \$29 million, excluding the assumption of \$17 million of third-party debt, to: (i) acquire the real property of administrative/office buildings located in Pennsylvania, Tennessee and Washington, D.C.; (ii) fund a deposit in connection with execution of a definitive agreement, which is subject to regulatory approvals and closing conditions, to acquire the Knapp Medical Center, including a 226-bed acute care hospital, a surgery center, physician practices and other related assets located in Weslaco, Texas, and; (iii) purchase a cardiology practice in Texas.

Divestitures:

During 2011 and January of 2012, we received aggregate net cash proceeds of approximately \$118 million for the sale of:

Hospital San Juan Capestrano, a 108-bed behavioral health facility located in Puerto Rico. The sale of this facility, which was completed in January, 2012, was made pursuant to our agreement with the Federal Trade Commission (*FTC*) in connection with our acquisition of *PSI*;

Montevista Hospital (101-bed) and Red Rock Hospital (21-bed) located in Las Vegas, Nevada. The sales of these behavioral health facilities, which were completed during the fourth quarter of 2011, were made pursuant to our agreement with the *FTC* in connection with our acquisition of *PSI*;

Meadowood Behavioral Health System, a 58-bed behavioral health facility located in New Castle, Delaware. The sale of this facility, which was completed during the third quarter of 2011, was made pursuant to our agreement with the *FTC* in connection with our acquisition of *PSI*, and;

other dispositions during 2011 including the real property of a closed acute care hospital and the sale of our majority ownership interest in a radiation oncology center located in Nevada.

The aggregate net pre-tax gain on the above-mentioned divestitures (excluding the Hospital San Juan Capestrano which was divested in January, 2012) did not have a material impact on our 2011 consolidated results of operations. The pre-tax gain on the divestiture of the Hospital San Juan Capestrano, which will not have a material impact on our 2012 consolidated results of operations, will be reflected in our consolidated results of operations during the first quarter of 2012. The assets and liabilities for the Hospital San Juan Capestrano are reflected as *held for sale* on our Consolidated Balance Sheet as of December 31, 2011.

The *PSI* Acquisition

In November, 2010, we acquired Psychiatric Solutions, Inc. for a total purchase price of \$3.04 billion consisting of \$1.96 billion in cash plus the assumption of approximately \$1.08 billion of *PSI*'s debt, the majority of which has since been refinanced. *PSI* was formerly the largest operator of freestanding inpatient behavioral health care facilities operating a total of 105 inpatient and outpatient facilities in 32 states, Puerto Rico, and the U.S. Virgin Islands.

The facilities acquired by us, with an aggregate of approximately 11,500 licensed beds at the time of acquisition, offer an extensive continuum of behavioral health programs to critically ill children, adolescents and adults. We also acquired management contracts to manage freestanding behavioral health care inpatient facilities for government agencies and behavioral health units within certain medical/surgical hospitals owned by third-parties.

Combined with our previously existing behavioral health care operations located throughout the U.S., we believe this acquisition makes us the largest facility-based provider in the behavioral health care sector. Our increased operating scale may allow us to operate more efficiently and enhance our presence within certain

Table of Contents

markets. We also achieved planned operating expense reductions during 2011 primarily through the elimination of PSI-related corporate overhead. This acquisition also helps diminish our geographic concentration in certain markets thereby diversifying our overall portfolio and reducing our reliance on one hospital or a cluster of hospitals in a certain market.

Hospital Utilization

We believe that the most important factors relating to the overall utilization of a hospital include the quality and market position of the hospital and the number, quality and specialties of physicians providing patient care within the facility. Generally, we believe that the ability of a hospital to meet the health care needs of its community is determined by its breadth of services, level of technology, emphasis on quality of care and convenience for patients and physicians. Other factors that affect utilization include general and local economic conditions, market penetration of managed care programs, the degree of outpatient use, the availability of reimbursement programs such as Medicare and Medicaid, and demographic changes such as the growth in local populations. Utilization across the industry also is being affected by improvements in clinical practice, medical technology and pharmacology. Current industry trends in utilization and occupancy have been significantly affected by changes in reimbursement policies of third party payors. We are also unable to predict the extent to which these industry trends will continue or accelerate. In addition, hospital operations are subject to certain seasonal fluctuations, such as higher patient volumes and net patient service revenues in the first and fourth quarters of the year.

The following table sets forth certain operating statistics for hospitals operated by us for the years indicated. Accordingly, information related to hospitals acquired during the five-year period has been included from the respective dates of acquisition, and information related to hospitals divested during the five year period has been included up to the respective dates of divestiture. Information related to the behavioral health care facilities acquired by us in connection with our acquisition of PSI is included for the period of November 16, 2010 through December 31, 2011, excluding the 3 former PSI facilities that are reflected as discontinued operations, as discussed herein. The licensed and available beds for those facilities are included in 2010 on a weighted average basis for the period owned.

	2011	2010	2009	2008	2007
Average Licensed Beds:					
Acute Care Hospitals (1)	5,726	5,689	5,484	6,101	5,962
Behavioral Health Centers	19,280	9,427	7,921	7,658	7,348

Behavioral Health Centers	73%	73%	73%	75%	75%

- (1) Central Montgomery Medical Center located in Pennsylvania was divested during the fourth quarter of 2008. The statistical information for this facility is included in the above information through the divestiture date.

Table of Contents

- (2) **Average Available Beds** is the number of beds which are actually in service at any given time for immediate patient use with the necessary equipment and staff available for patient care. A hospital may have appropriate licenses for more beds than are in service for a number of reasons, including lack of demand, incomplete construction, and anticipation of future needs
- (3) **Patient Days** is the sum of all patients for the number of days that hospital care is provided to each patient.
- (4) **Occupancy Rate** is calculated by dividing average patient days (total patient days divided by the total number of days in the period) by the number of average beds, either available or licensed.

Sources of Revenue

We receive payments for services rendered from private insurers, including managed care plans, the federal government under the Medicare program, state governments under their respective Medicaid programs and directly from patients. See *Item 7. Management's Discussion and Analysis of Financial Condition and Results of Operations - Sources of Revenue* for additional disclosure. Other information related to our revenues, income and other operating information for each reporting segment of our business is provided in Note 11 to our Consolidated Financial Statements, *Segment Reporting*.

Regulation and Other Factors

Overview: The healthcare industry is subject to numerous laws, regulations and rules including, among others, those related to government healthcare participation requirements, various licensure and accreditations, reimbursement for patient services, health information privacy and security rules, and Medicare and Medicaid fraud and abuse provisions (including, but not limited to, federal statutes and regulations prohibiting kickbacks and other illegal inducements to potential referral sources, false claims submitted to federal health care programs and self-referrals by physicians). Providers that are found to have violated any of these laws and regulations may be excluded from participating in government healthcare programs, subjected to significant fines or penalties and/or required to repay amounts received from the government for previously billed patient services. Although we believe our policies, procedures and practices comply with governmental regulations, no assurance can be given that we will not be subjected to additional governmental inquiries or actions, or that we would not be faced with sanctions, fines or penalties if so subjected. Even if we were to ultimately prevail, a significant governmental inquiry or action under one of the above laws, regulations or rules could have a material adverse impact on us.

Licensing, Certification and Accreditation: All of our hospitals are subject to compliance with various federal, state and local statutes and regulations and receive periodic inspection by state licensing agencies to review standards of medical care, equipment and cleanliness. Our hospitals must also comply with the conditions of participation and licensing requirements of federal, state and local health agencies, as well as the requirements of municipal building codes, health codes and local fire departments. Various other licenses and permits are also required in order to dispense narcotics, operate pharmacies, handle radioactive materials and operate certain equipment.

All of our eligible hospitals have been accredited by the Joint Commission. All of our acute care hospitals and most of our behavioral health centers are certified as providers of Medicare and Medicaid services by the appropriate governmental authorities.

If any of our facilities were to lose its Joint Commission accreditation or otherwise lose its certification under the Medicare and Medicaid programs, the facility may be unable to receive reimbursement from the Medicare and Medicaid programs and other payors. We believe our facilities are in substantial compliance with current applicable federal, state, local and independent review body regulations and standards. The requirements for licensure, certification and accreditation are subject to change and, in order to remain qualified, it may become necessary for us to make changes in our facilities, equipment, personnel and services in the future, which could have a material adverse impact on operations.

Table of Contents

Certificates of Need: Many of the states in which we operate hospitals have enacted certificates of need (CON) laws as a condition prior to hospital capital expenditures, construction, expansion, modernization or initiation of major new services. Failure to obtain necessary state approval can result in our inability to complete an acquisition, expansion or replacement, the imposition of civil or, in some cases, criminal sanctions, the inability to receive Medicare or Medicaid reimbursement or the revocation of a facility s license, which could harm our business. In addition, significant CON reforms have been proposed in a number of states that would increase the capital spending thresholds and provide exemptions of various services from review requirements. In the past, we have not experienced any material adverse effects from those requirements, but we cannot predict the impact of these changes upon our operations.

Conversion Legislation: Many states have enacted or are considering enacting laws affecting the conversion or sale of not-for-profit hospitals to for-profit entities. These laws generally require prior approval from the attorney general, advance notification and community involvement. In addition, attorneys general in states without specific conversion legislation may exercise discretionary authority over these transactions. Although the level of government involvement varies from state to state, the trend is to provide for increased governmental review and, in some cases, approval of a transaction in which a not-for-profit entity sells a health care facility to a for-profit entity. The adoption of new or expanded conversion legislation and the increased review of not-for-profit hospital conversions may limit our ability to grow through acquisitions of not-for-profit hospitals.

Utilization Review: Federal regulations require that admissions and utilization of facilities by Medicare and Medicaid patients must be reviewed in order to ensure efficient utilization of facilities and services. The law and regulations require Peer Review Organizations (PROs) to review the appropriateness of Medicare and Medicaid patient admissions and discharges, the quality of care provided, the validity of diagnosis related group (DRG) classifications and the appropriateness of cases of extraordinary length of stay. PROs may deny payment for services provided, assess fines and also have the authority to recommend to the Department of Health and Human Services (HHS) that a provider that is in substantial non-compliance with the standards of the PRO be excluded from participating in the Medicare program. We have contracted with PROs in each state where we do business to perform the required reviews.

Audits: Most hospitals are subject to federal audits to validate the accuracy of Medicare and Medicaid program submitted claims. If these audits identify overpayments, we could be required to pay a substantial rebate of prior years payments subject to various administrative appeal rights. The federal government contracts with third-party recovery audit contractors (RACs) and Medicaid integrity contractors (MICs), on a contingent fee basis, to audit the propriety of payments to Medicare and Medicaid providers. Permanent RAC audits were created by Section 302 of the Tax Relief and Health Care Act of 2006 and required the secretary to expand the program to all 50 states by no later than 2010. Similarly, Medicare zone program integrity contractors (ZPICs) target claims for potential fraud and abuse. Additionally, Medicare administrative contractors (MACs) must ensure they pay the right amount for covered and correctly coded services rendered to eligible beneficiaries by legitimate providers. We have undergone claims audits related to our receipt of federal healthcare payments during the last three years, the results of which have not required material adjustments to our consolidated results of operations. However, potential liability from future federal or state audits could ultimately exceed established reserves, and any excess could potentially be substantial. Further, Medicare and Medicaid regulations also provide for withholding Medicare and Medicaid overpayments in certain circumstances, which could adversely affect our cash flow.

Self-Referral and Anti-Kickback Legislation

The Stark Law: The Social Security Act includes a provision commonly known as the Stark Law. This law prohibits physicians from referring Medicare and Medicaid patients to entities with which they or any of their immediate family members have a financial relationship, unless an exception is met. These types of referrals are known as self-referrals. Sanctions for violating the Stark Law include civil penalties up to \$15,000

Table of Contents

for each violation, up to \$100,000 for sham arrangements, up to \$10,000 for each day an entity fails to report required information and exclusion from the federal health care programs. There are a number of exceptions to the self-referral prohibition, including an exception for a physician's ownership interest in an entire hospital as opposed to an ownership interest in a hospital department unit, service or subpart. However, federal laws and regulations now limit the ability of hospitals relying on this exception to expand aggregate physician ownership interest or to expand certain hospital facilities. There are also exceptions for many of the customary financial arrangements between physicians and providers, including employment contracts, leases and recruitment agreements that adhere to certain enumerated requirements.

We monitor all aspects of our business and have developed a comprehensive ethics and compliance program that is designed to meet or exceed applicable federal guidelines and industry standards. Nonetheless, because the law in this area is complex and constantly evolving, there can be no assurance that federal regulatory authorities will not determine that any of our arrangements with physicians violate the Stark Law.

Anti-kickback Statute: A provision of the Social Security Act known as the anti-kickback statute prohibits healthcare providers and others from directly or indirectly soliciting, receiving, offering or paying money or other remuneration to other individuals and entities in return for using, referring, ordering, recommending or arranging for such referrals or orders of services or other items covered by a federal or state health care program. However, recent changes to the anti-kickback statute have reduced the intent required for violation; one is no longer required to have actual knowledge or specific intent to commit a violation of the anti-kickback statute in order to be found guilty of violating such law.

The anti-kickback statute contains certain exceptions, and the Office of the Inspector General of the Department of Health and Human Services (OIG) has issued regulations that provide for safe harbors, from the federal anti-kickback statute for various activities. These activities, which must meet certain requirements, include (but are not limited to) the following: investment interests, space rental, equipment rental, practitioner recruitment, personnel services and management contracts, sale of practice, referral services, warranties, discounts, employees, group purchasing organizations, waiver of beneficiary coinsurance and deductible amounts, managed care arrangements, obstetrical malpractice insurance subsidies, investments in group practices, freestanding surgery centers, donation of technology for electronic health records and referral agreements for specialty services. The fact that conduct or a business arrangement does not fall within a safe harbor or exception does not automatically render the conduct or business arrangement illegal under the anti-kickback statute. However, such conduct and business arrangements may lead to increased scrutiny by government enforcement authorities.

Although we believe that our arrangements with physicians and other referral sources have been structured to comply with current law and available interpretations, there can be no assurance that all arrangements comply with an available safe harbor or that regulatory authorities enforcing these laws will determine these financial arrangements do not violate the anti-kickback statute or other applicable laws. Violations of the anti-kickback statute may be punished by a criminal fine of up to \$25,000 for each violation or imprisonment, however, under 18 U.S.C. Section 3571, this fine may be increased to \$250,000 for individuals and \$500,000 for organizations. Civil money penalties may include fines of up to \$50,000 per violation and damages of up to three times the total amount of the remuneration and/or exclusion from participation in Medicare and Medicaid.

Similar State Laws: Many of the states in which we operate have adopted laws that prohibit payments to physicians in exchange for referrals similar to the anti-kickback statute and the Stark Law, some of which apply regardless of the source of payment for care. These statutes typically provide criminal and civil penalties as well as loss of licensure. In many instances, the state statutes provide that any arrangement falling in a federal safe harbor will be immune from scrutiny under the state statutes. However, in most cases, little precedent exists for the interpretation or enforcement of these state laws.

These laws and regulations are extremely complex and, in many cases, we don't have the benefit of regulatory or judicial interpretation. It is possible that different interpretations or enforcement of these laws and regulations could subject our current or past practices to allegations of impropriety or illegality or could require

Table of Contents

us to make changes in our facilities, equipment, personnel, services, capital expenditure programs and operating expenses. A determination that we have violated one or more of these laws, or the public announcement that we are being investigated for possible violations of one or more of these laws (see Legal Proceedings), could have a material adverse effect on our business, financial condition or results of operations and our business reputation could suffer significantly. In addition, we cannot predict whether other legislation or regulations at the federal or state level will be adopted, what form such legislation or regulations may take or what their impact on us may be.

If we are deemed to have failed to comply with the anti-kickback statute, the Stark Law or other applicable laws and regulations, we could be subjected to liabilities, including criminal penalties, civil penalties (including the loss of our licenses to operate one or more facilities), and exclusion of one or more facilities from participation in the Medicare, Medicaid and other federal and state health care programs. The imposition of such penalties could have a material adverse effect on our business, financial condition or results of operations.

Federal False Claims Act and Similar State Regulations: A current trend affecting the health care industry is the increased use of the federal False Claims Act, and, in particular, actions being brought by individuals on the government's behalf under the False Claims Act's qui tam, or whistleblower, provisions. Whistleblower provisions allow private individuals to bring actions on behalf of the government by alleging that the defendant has defrauded the Federal government.

When a defendant is determined by a court of law to have violated the False Claims Act, the defendant may be liable for up to three times the actual damages sustained by the government, plus mandatory civil penalties of between \$5,500 to \$11,000 for each separate false claim. There are many potential bases for liability under the False Claims Act. Liability often arises when an entity knowingly submits a false claim for reimbursement to the federal government. The Fraud Enforcement and Recovery Act of 2009 (FERA) has expanded the number of actions for which liability may attach under the False Claims Act, eliminating requirements that false claims be presented to federal officials or directly involve federal funds. FERA also clarifies that a false claim violation occurs upon the knowing retention, as well as the receipt, of overpayments. In addition, recent changes to the anti-kickback statute have made violations of that law punishable under the civil False Claims Act. Further, a number of states have adopted their own false claims provisions as well as their own whistleblower provisions whereby a private party may file a civil lawsuit on behalf of the state in state court.

Other Fraud and Abuse Provisions: The Social Security Act also imposes criminal and civil penalties for submitting false claims to Medicare and Medicaid. False claims include, but are not limited to, billing for services not rendered, billing for services without prescribed documentation, misrepresenting actual services rendered in order to obtain higher reimbursement and cost report fraud. Like the anti-kickback statute, these provisions are very broad.

Further, the Health Insurance Portability and Accountability Act of 1996 (HIPAA) broadened the scope of the fraud and abuse laws by adding several criminal provisions for health care fraud offenses that apply to all health benefit programs, whether or not payments under such programs are paid pursuant to federal programs. HIPAA also introduced enforcement mechanisms to prevent fraud and abuse in Medicare. There are civil penalties for prohibited conduct, including, but not limited to billing for medically unnecessary products or services.

HIPAA Administrative Simplification and Privacy Requirements: The administrative simplification provisions of HIPAA, as amended by the Health Information Technology for Economic and Clinical Health Act (HITECH), require the use of uniform electronic data transmission standards for health care claims and payment transactions submitted or received electronically. These provisions are intended to encourage electronic commerce in the health care industry. HIPAA also established federal rules protecting the privacy and security of personal health information. The privacy and security regulations address the use and disclosure of individual health care information and the rights of patients to understand and control how such information is used and disclosed. Violations of HIPAA can result in both criminal and civil fines and penalties.

Table of Contents

Compliance with the electronic data transmission standards became mandatory in October 2003. However, during the following year, HHS agreed to allow providers and other electronic billers to continue to submit pre-HIPAA format electronic claims for periods after October 16, 2003, provided they can show good faith efforts to become HIPAA compliant. Since this exception expired, we believe that we have been in compliance with the electronic data transmission standards.

We were required to comply with the privacy requirements of HIPAA by April 14, 2003. We believe that we were in material compliance with the privacy regulations by that date and remain so, as we continue to develop training and revise procedures to address ongoing compliance. The HIPAA security regulations require health care providers to implement administrative, physical and technical safeguards to protect the confidentiality, integrity and availability of patient information. HITECH has since strengthened certain HIPAA rules regarding the use and disclosure of protected health information, extended certain HIPAA provisions to business associates, and created new security breach notification requirements. HITECH has also extended the ability to impose civil money penalties on providers not knowing that a HIPAA violation has occurred. We were required to comply with the security regulations by April 20, 2005 and believe that we have been in substantial compliance with HIPAA and HITECH requirements to date.

Red Flags Rule: In addition, the Federal Trade Commission (FTC) Red Flags Rule requires financial institutions and businesses maintaining accounts to address the risk of identity theft. The Red Flag Program Clarification Act of 2010, signed on December 18, 2010, appears to exclude certain healthcare providers from the Red Flags Rule, but permits the FTC or relevant agencies to designate additional creditors subject to the Red Flags Rule through future rulemaking if the agencies determine that the person in question maintains accounts subject to foreseeable risk of identity theft. Compliance with any such future rulemaking may require additional expenditures in the future.

Patient Safety and Quality Improvement Act of 2005: On July 29, 2005, the Patient Safety and Quality Improvement Act of 2005 was enacted, which has the goal of reducing medical errors and increasing patient safety. This legislation establishes a confidential reporting structure in which providers can voluntarily report Patient Safety Work Product (PSWP) to Patient Safety Organizations (PSOs). Under the system, PSWP is made privileged, confidential and legally protected from disclosure. PSWP does not include medical, discharge or billing records or any other original patient or provider records but does include information gathered specifically in connection with the reporting of medical errors and improving patient safety. This legislation does not preempt state or federal mandatory disclosure laws concerning information that does not constitute PSWP. PSOs are certified by the Secretary of the HHS for three-year periods and analyze PSWP, provide feedback to providers and may report non-identifiable PSWP to a database. In addition, PSOs are expected to generate patient safety improvement strategies.

Environmental Regulations: Our healthcare operations generate medical waste that must be disposed of in compliance with federal, state and local environmental laws, rules and regulations. Infectious waste generators, including hospitals, face substantial penalties for improper disposal of medical waste, including civil penalties of up to \$25,000 per day of noncompliance, criminal penalties of up to \$50,000 per day, imprisonment, and remedial costs. In addition, our operations, as well as our purchases and sales of facilities are subject to various other environmental laws, rules and regulations. We believe that our disposal of such wastes is in material compliance with all state and federal laws.

Corporate Practice of Medicine: Several states, including Florida, Nevada, California and Texas, have laws and/or regulations that prohibit corporations and other entities from employing physicians and practicing medicine for a profit or that prohibit certain direct and indirect payments or fee-splitting arrangements between health care providers that are designed to induce or encourage the referral of patients to, or the recommendation of, particular providers for medical products and services. Possible sanctions for violation of these restrictions include loss of license and civil and criminal penalties. In addition, agreements between the corporation and the physician may be considered void and unenforceable. These statutes and/or regulations vary from state to state,

Table of Contents

are often vague and have seldom been interpreted by the courts or regulatory agencies. We do not expect these state corporate practice of medicine proscriptions to significantly affect our operations. Many states have laws and regulations which prohibit payments for referral of patients and fee-splitting with physicians. We do not make any such payments or have any such arrangements.

EMTALA: All of our hospitals are subject to the Emergency Medical Treatment and Active Labor Act (EMTALA). This federal law generally requires hospitals that are certified providers under Medicare to conduct a medical screening examination of every person who visits the hospital's emergency room for treatment and, if the patient is suffering from a medical emergency, to either stabilize the patient's condition or transfer the patient to a facility that can better handle the condition. Our obligation to screen and stabilize emergency medical conditions exists regardless of a patient's ability to pay for treatment. There are severe penalties under EMTALA if a hospital fails to screen or appropriately stabilize or transfer a patient or if the hospital delays appropriate treatment in order to first inquire about the patient's ability to pay. Penalties for violations of EMTALA include civil monetary penalties and exclusion from participation in the Medicare program. In addition to any liabilities that a hospital may incur under EMTALA, an injured patient, the patient's family or a medical facility that suffers a financial loss as a direct result of another hospital's violation of the law can bring a civil suit against the hospital unrelated to the rights granted under that statute.

The federal government broadly interprets EMTALA to cover situations in which patients do not actually present to a hospital's emergency room, but present for emergency examination or treatment to the hospital's campus, generally, or to a hospital-based clinic that treats emergency medical conditions or are transported in a hospital-owned ambulance, subject to certain exceptions. EMTALA does not generally apply to patients admitted for inpatient services; however, CMS has recently sought industry comments on the potential applicability of EMTALA to hospital inpatients and the responsibilities of hospitals with specialized capabilities, respectively. The government also has expressed its intent to investigate and enforce EMTALA violations actively in the future. We believe that we operate in substantial compliance with EMTALA.

Health Care Industry Investigations: We are subject to claims and suits in the ordinary course of business, including those arising from care and treatment afforded by our hospitals and are party to various government investigations and litigation. Please see *Item 3. Legal Proceedings* included herein for additional disclosure. In addition, currently, and from time to time, some of our facilities are subjected to inquiries and/or actions and receive notices of potential non-compliance of laws and regulations from various federal and state agencies. Providers that are found to have violated these laws and regulations may be excluded from participating in government healthcare programs, subjected to potential licensure, certification, and/or accreditation revocation, subjected to fines or penalties or required to repay amounts received from the government for previously billed patient services.

We monitor all aspects of our business and have developed a comprehensive ethics and compliance program that is designed to meet or exceed applicable federal guidelines and industry standards. Because the law in this area is complex and constantly evolving, governmental investigation or litigation may result in interpretations that are inconsistent with industry practices, including ours. Although we believe our policies, procedures and practices comply with governmental regulations, no assurance can be given that we will not be subjected to inquiries or actions, or that we will not be faced with sanctions, fines or penalties in connection with the investigations. Even if we were to ultimately prevail, the government's inquiry and/or action in connection with these matters could have a material adverse effect on our future operating results.

Our substantial Medicare, Medicaid and other governmental billings may result in heightened scrutiny of our operations. It is possible that governmental entities could initiate additional investigations or litigation in the future and that such matters could result in significant penalties as well as adverse publicity. It is also possible that our executives and/or managers could be included as targets or witnesses in governmental investigations or litigation and/or named as defendants in private litigation.

Table of Contents

Revenue Rulings 98-15 and 2004-51: In March 1998 and May 2004, the IRS issued guidance regarding the tax consequences of joint ventures between for-profit and not-for-profit hospitals. As a result of the tax rulings, the IRS has proposed, and may in the future propose, to revoke the tax-exempt or public charity status of certain not-for-profit entities which participate in such joint ventures or to treat joint venture income as unrelated business taxable income to them. The tax rulings have limited development of joint ventures and any adverse determination by the IRS or the courts regarding the tax-exempt or public charity status of a not-for-profit partner or the characterization of joint venture income as unrelated business taxable income could further limit joint venture development with not-for-profit hospitals, and/or require the restructuring of certain existing joint ventures with not-for-profits.

State Rate Review: Some states where we operate hospitals have adopted legislation mandating rate or budget review for hospitals or have adopted taxes on hospital revenues, assessments or licensure fees to fund indigent health care within the state. In the aggregate, state rate reviews and indigent tax provisions have not materially, adversely affected our results of operations.

Medical Malpractice Tort Law Reform: Medical malpractice tort law has historically been maintained at the state level. All states have laws governing medical liability lawsuits. Over half of the states have limits on damages awards. Almost all states have eliminated joint and several liability in malpractice lawsuits, and many states have established limits on attorney fees. Recently, many states had bills introduced in their legislative sessions to address medical malpractice tort reform. Proposed solutions include enacting limits on non-economic damages, malpractice insurance reform, and gathering lawsuit claims data from malpractice insurance companies and the courts for the purpose of assessing the connection between malpractice settlements and premium rates. Reform legislation has also been proposed, but not adopted, at the federal level that could preempt additional state legislation in this area.

Compliance Program: Our company-wide compliance program has been in place since 1998. Currently, the program's elements include a Code of Conduct, risk area specific policies and procedures, employee education and training, an internal system for reporting concerns, auditing and monitoring programs, and a means for enforcing the program's policies.

Since its initial adoption, the compliance program continues to be expanded and developed to meet the industry's expectations and our needs. Specific written policies, procedures, training and educational materials and programs, as well as auditing and monitoring activities have been prepared and implemented to address the functional and operational aspects of our business. Specific areas identified through regulatory interpretation and enforcement activities have also been addressed in our program. Claims preparation and submission, including coding, billing, and cost reports, comprise the bulk of these areas. Financial arrangements with physicians and other referral sources, including compliance with anti-kickback and Stark laws and emergency department treatment and transfer requirements are also the focus of policy and training, standardized documentation requirements, and review and audit.

Medical Staff and Employees

Our facilities had approximately 65,400 employees on December 31, 2011, of whom approximately 46,500 were employed full-time. Our hospitals are staffed by licensed physicians who have been admitted to the medical staff of individual hospitals. Typically, physicians are not employees of our hospitals and in a number of our markets may have admitting privileges at other hospitals in addition to ours. Within our acute care division, approximately 100 physicians are employed either directly by certain of our facilities or affiliated by group practices structured as 501A corporations. Members of the medical staffs of our hospitals also serve on the medical staffs of hospitals not owned by us and may terminate their affiliation with our hospitals at any time. In addition, we employ approximately 350 psychiatrists within our behavioral health division. Each of our hospitals are managed on a day-to-day basis by a managing director employed by us. In addition, a Board of Governors, including members of the hospital's medical staff, governs the medical, professional and ethical practices at each hospital.

Table of Contents

Approximately 2,100 of our employees at seven of our hospitals are unionized. At Valley Hospital Medical Center, unionized employees belong to the Culinary Workers and Bartenders Union, the International Union of Operating Engineers and the Service Employees International Union (SEIU). Nurses and technicians at Desert Springs Hospital are represented by the SEIU. Registered nurses at Auburn Regional Medical Center located in Washington are represented by the United Staff Nurses Union, the technical employees are represented by the United Food and Commercial Workers, and the service employees are represented by the SEIU. At The George Washington University Hospital, unionized employees are represented by the SEIU or the Hospital Police Association. Registered Nurses, Licensed Practical Nurses, certain technicians and therapists, pharmacy assistants, and some clerical employees at HRI Hospital in Boston are represented by the SEIU. At Brooke Glen Behavioral Hospital, unionized employees are represented by the Teamsters and the Northwestern Nurses Association/Pennsylvania Association of Staff Nurses and Allied Professionals. We believe that our relations with our employees are satisfactory.

Competition

The health care industry is highly competitive. In recent years, competition among healthcare providers for patients has intensified in the United States due to, among other things, regulatory and technological changes, increasing use of managed care payment systems, cost containment pressures and a shift toward outpatient treatment. In all of the geographical areas in which we operate, there are other hospitals that provide services comparable to those offered by our hospitals. In addition, some of our competitors include hospitals that are owned by tax-supported governmental agencies or by nonprofit corporations and may be supported by endowments and charitable contributions and exempt from property, sale and income taxes. Such exemptions and support are not available to us.

In some markets, certain of our competitors may have greater financial resources, be better equipped and offer a broader range of services than us. Certain hospitals that are located in the areas served by our facilities are specialty or large hospitals that provide medical, surgical and behavioral health services, facilities and equipment that are not available at our hospitals. The increase in outpatient treatment and diagnostic facilities, outpatient surgical centers and freestanding ambulatory surgical also increases competition for us.

The number and quality of the physicians on a hospital's staff are important factors in determining a hospital's success and competitive advantage. Typically, physicians are responsible for making hospital admissions decisions and for directing the course of patient treatment. We believe that physicians refer patients to a hospital primarily on the basis of the patient's needs, the quality of other physicians on the medical staff, the location of the hospital and the breadth and scope of services offered at the hospital's facilities. We strive to retain and attract qualified doctors by maintaining high ethical and professional standards and providing adequate support personnel, technologically advanced equipment and facilities that meet the needs of those physicians.

In addition, we depend on the efforts, abilities, and experience of our medical support personnel, including our nurses, pharmacists and lab technicians and other health care professionals. We compete with other health care providers in recruiting and retaining qualified hospital management, nurses and other medical personnel. Our acute care and behavioral health care facilities are experiencing the effects of a shortage of skilled nursing staff nationwide, which has caused and may continue to cause an increase in salaries, wages and benefits expense in excess of the inflation rate. In addition, in some markets like California, there are requirements to maintain specified nurse-staffing levels. To the extent we cannot meet those levels, we may be required to limit the healthcare services provided in these markets which would have a corresponding adverse effect on our net operating revenues.

Many states in which we operate hospitals have CON laws. The application process for approval of additional covered services, new facilities, changes in operations and capital expenditures is, therefore, highly competitive in these states. In those states that do not have CON laws or which set relatively high levels of expenditures before they become reviewable by state authorities, competition in the form of new services, facilities and capital spending is more prevalent. See Regulation and Other Factors.

Table of Contents

Our ability to negotiate favorable service contracts with purchasers of group health care services also affects our competitive position and significantly affects the revenues and operating results of our hospitals. Managed care plans attempt to direct and control the use of hospital services and to demand that we accept lower rates of payment. In addition, employers and traditional health insurers are increasingly interested in containing costs through negotiations with hospitals for managed care programs and discounts from established charges. In return, hospitals secure commitments for a larger number of potential patients. Generally, hospitals compete for service contracts with group health care service purchasers on the basis of price, market reputation, geographic location, quality and range of services, quality of the medical staff and convenience. The importance of obtaining contracts with managed care organizations varies from market to market depending on the market strength of such organizations.

A key element of our growth strategy is expansion through the acquisition of additional hospitals in select markets. The competition to acquire hospitals is significant. We face competition for acquisition candidates primarily from other for-profit health care companies, as well as from not-for-profit entities. Some of our competitors have greater resources than we do. We intend to selectively seek opportunities to expand our base of operations by adhering to our disciplined program of rational growth, but may not be successful in accomplishing acquisitions on favorable terms.

Relationship with Universal Health Realty Income Trust

At December 31, 2011, we held approximately 6.2% of the outstanding shares of Universal Health Realty Income Trust (the Trust). We serve as Advisor to the Trust under an annually renewable advisory agreement pursuant to the terms of which we conduct the Trust's day-to-day affairs, provide administrative services and present investment opportunities. In addition, certain of our officers and directors are also officers and/or directors of the Trust. Management believes that it has the ability to exercise significant influence over the Trust, therefore we account for our investment in the Trust using the equity method of accounting. We earned an advisory fee from the Trust, which is included in net revenues in the accompanying consolidated statements of income, of approximately \$2.0 million during 2011, \$1.8 million during 2010 and \$1.6 million during 2009.

Our pre-tax share of income from the Trust was \$4.6 million during 2011, \$1.0 million during 2010 and \$1.1 million during 2009, and is included in net revenues in the accompanying consolidated statements of income for each year. Included in our share of the Trust's income for 2011 was approximately \$3.7 million related to our share of the following: (i) an aggregate gain realized by the Trust during 2011 in connection with the sale of medical office buildings by various limited liability companies (LLCs) in which the Trust formerly held noncontrolling, majority ownership interests; (ii) an aggregate gain recorded by the Trust during 2011 in connection with its purchases of third-party minority ownership interests in various LLCs in which the Trust formerly held noncontrolling majority ownership interests (the Trust now owns 100% of each of these entities), partially offset by; (iii) a provision for asset impairment recorded by the Trust during 2011 in connection with a medical office building located in Atlanta, Georgia.

The carrying value of our investment in the Trust was \$9.9 million and \$7.3 million at December 31, 2011 and 2010, respectively, and is included in other assets in the accompanying consolidated balance sheets. The market value of our investment in the Trust was \$30.7 million at December 31, 2011 and \$28.8 million at December 31, 2010, based on the closing price of the Trust's stock on the respective dates.

Total rent expense under the operating leases on the four hospital facilities with the Trust (as discussed below) was \$16.3 million during 2011, \$16.2 million during 2010 and \$16.3 million during 2009. In addition, certain of our subsidiaries are tenants in several medical office buildings owned by limited liability companies in which the Trust holds either 100% of the ownership interest or various noncontrolling, majority ownership interests.

The Trust commenced operations in 1986 by purchasing certain properties from us and immediately leasing the properties back to our respective subsidiaries. Most of the leases were entered into at the time the Trust commenced operations and provided for initial terms of 13 to 15 years with up to six additional 5-year renewal

Table of Contents

terms. Each lease also provided for additional or bonus rental, as discussed below. The base rents are paid monthly and the bonus rents are computed and paid on a quarterly basis, based upon a computation that compares current quarter revenue to a corresponding quarter in the base year. The leases with our subsidiaries are unconditionally guaranteed by us and are cross-defaulted with one another.

Pursuant to the terms of the leases with the Trust, we have the option to renew the leases at the lease terms described above by providing notice to the Trust at least 90 days prior to the termination of the then current term. In addition, we have rights of first refusal to: (i) purchase the respective leased facilities during and for 180 days after the lease terms at the same price, terms and conditions of any third-party offer, or; (ii) renew the lease on the respective leased facility at the end of, and for 180 days after, the lease term at the same terms and conditions pursuant to any third-party offer. We also have the right to purchase the respective leased facilities at the end of the lease terms or any renewal terms at their appraised fair market value as well as purchase any or all of the four leased hospital properties at their appraised fair market value upon one month's notice should a change of control of the Trust occur.

On May 19, 2011, certain of our subsidiaries provided the required notice to the Trust exercising the 5-year renewal options on McAllen Medical Center, Wellington Regional Medical Center and Southwest Healthcare System, Inland Valley Campus which extended the lease terms to December, 2016.

The table below details the renewal options and terms for each of our four hospital facilities leased from the Trust, giving effect to the above-mentioned renewals:

Hospital Name	Type of Facility	Annual Minimum Rent	End of Lease Term	Renewal Term (years)
McAllen Medical Center	Acute Care	\$ 5,485,000	December, 2016	15(a)
Wellington Regional Medical Center	Acute Care	\$ 3,030,000	December, 2016	15(b)
Southwest Healthcare System, Inland Valley Campus	Acute Care	\$ 2,648,000	December, 2016	15(b)
The Bridgeway	Behavioral Health	\$ 930,000	December, 2014	10(c)

- (a) We have three 5-year renewal options at existing lease rates (through 2031).
- (b) We have one 5-year renewal options at existing lease rates (through 2021) and two 5-year renewal options at fair market value lease rates (2022 through 2031).
- (c) We have two 5-year renewal options at fair market value lease rates (2015 through 2024).

Executive Officers of the Registrant

The executive officers, whose terms will expire at such time as their successors are elected, are as follows:

Name and Age	Present Position with the Company
Alan B. Miller (74)	Chairman of the Board and Chief Executive Officer
Marc D. Miller (41)	President and Director
Steve G. Filton (54)	Senior Vice President, Chief Financial Officer and Secretary
Debra K. Osteen (56)	Senior Vice President, President of Behavioral Health Care Division
Marvin G. Pember (58)	Senior Vice President, President of Acute Care Division

Mr. Alan B. Miller has been Chairman of the Board and Chief Executive Officer since inception and also served as President from inception until May, 2009. Prior thereto, he was President, Chairman of the Board and Chief Executive Officer of American Medicorp, Inc. He currently serves as Chairman of the Board, Chief Executive Officer and President of Universal Health Realty Income Trust. Mr. Miller also serves as a Director of Penn Mutual Life Insurance Company. He is the father of Marc D. Miller, President and Director.

Table of Contents

Mr. Marc D. Miller was elected President in May, 2009 and prior thereto served as Senior Vice President and co-head of our Acute Care Hospitals since 2007. He was elected a Director in May, 2006 and Vice President in 2005. He has served in various capacities related to our acute care division since 2000. He was elected to the Board of Trustees of Universal Health Realty Income Trust in December, 2008. He is the son of Alan B. Miller, our Chairman of the Board and Chief Executive Officer.

Mr. Filton was elected Senior Vice President and Chief Financial Officer in 2003 and he was elected Secretary in 1999. He had served as Vice President and Controller since 1991 and Director of Corporate Accounting since 1985.

Ms. Osteen was elected Senior Vice President in 2005 and serves as President of our Behavioral Health Care Division. She was elected Vice President in 2000 and has served in various capacities related to our Behavioral Health Care facilities since 1984.

Mr. Pember commenced employment with us in August, 2011 and serves as President of our Acute Care Division. He was formerly employed for 12 years at Indiana University Health, Inc. (formerly known as Clarian Health Partners, Inc.), a nonprofit hospital system that operates 16 facilities in Indiana, where he served as Executive Vice President and Chief Financial Officer.

ITEM 1A. Risk Factors

We are subject to numerous known and unknown risks, many of which are described below and elsewhere in this Annual Report. Any of the events described below could have a material adverse effect on our business, financial condition and results of operations. Additional risks and uncertainties that we are not aware of, or that we currently deem to be immaterial, could also impact our business and results of operations.

A significant portion of our revenue is produced by facilities located in Nevada, Texas and California.

Nevada: We own 6 acute care hospitals and 4 behavioral healthcare facilities as listed in *Item 2. Properties* (we owned two additional behavioral health facilities which were acquired by us from PSI in November, 2010 before the facilities were divested during the third and fourth quarters of 2011 pursuant to our agreement with the Federal Trade Commission, as discussed herein). On a combined basis, these facilities contributed 18% in 2011, 23% in 2010 and 24% in 2009 of our consolidated net revenues. On a combined basis, after deducting an allocation for corporate overhead expense, these facilities generated 11% in 2011, 15% in 2010 and 14% in 2009 of our income from operations after net income attributable to noncontrolling interest.

Texas: We own 8 acute care hospitals and 14 behavioral healthcare facilities as listed in *Item 2. Properties*. On a combined basis, these facilities contributed 18% in 2011, 19% in 2010 and 20% in 2009 of our consolidated net revenues. On a combined basis, after deducting an allocation for corporate overhead expense, these facilities generated 14% in 2011, 15% in 2010 and 16% in 2009 of our income from operations after net income attributable to noncontrolling interest.

California: We own 4 acute care hospitals and 15 behavioral healthcare facilities as listed in *Item 2. Properties*. On a combined basis, these facilities contributed 10% of our consolidated net revenues during each of 2011, 2010 and 2009. On a combined basis, after deducting an allocation for corporate overhead expense, these facilities generated 5% in 2011, 4% in 2010 and 5% in 2009 of our income from operations after net income attributable to noncontrolling interest.

The significant portion of our revenues and earnings derived from these facilities makes us particularly sensitive to legislative, regulatory, economic, environmental and competition changes in Nevada, Texas and California. Any material change in the current payment programs or regulatory, economic, environmental or competitive conditions in these states could have a disproportionate effect on our overall business results.

Table of Contents

Our revenues and results of operations are significantly affected by payments received from the government and other third party payors.

We derive a significant portion of our revenue from third-party payors, including the Medicare and Medicaid programs. Changes in these government programs in recent years have resulted in limitations on reimbursement and, in some cases, reduced levels of reimbursement for healthcare services. Payments from federal and state government programs are subject to statutory and regulatory changes, administrative rulings, interpretations and determinations, requirements for utilization review, and federal and state funding restrictions, all of which could materially increase or decrease program payments, as well as affect the cost of providing service to patients and the timing of payments to facilities. We are unable to predict the effect of recent and future policy changes on our operations. In addition, the uncertainty and fiscal pressures placed upon federal and state governments as a result of, among other things, the substantial deterioration in general economic conditions and the funding requirements from the federal healthcare reform legislation, may affect the availability of taxpayer funds for Medicare and Medicaid programs. If the rates paid or the scope of services covered by government payors are reduced, there could be a material adverse effect on our business, financial position and results of operations.

We receive Medicaid revenues in excess of \$100 million annually from each of Texas, Pennsylvania, Virginia, Illinois and Washington, D.C., making us particularly sensitive to reductions in Medicaid and other state based revenue programs (which have been implemented in various forms with respect to our areas of operation in the respective 2012 state fiscal years) as well as regulatory, economic, environmental and competitive changes in those states. In the states in which we operate, based upon the state budgets for the 2012 fiscal year (which generally began at various times during the second half of 2011), we estimate that, on a blended basis, our aggregate Medicaid rates have been reduced by approximately 3% to 4% (or approximately \$45 million to \$55 million annually) from the average rates in effect during the states' 2011 fiscal years (which generally ended during the third quarter of 2011). Our consolidated results of operations for the year ended December 31, 2011 include the pro rata portion of these Medicaid rate reductions. We can provide no assurance that further reductions to Medicaid revenues (which have been proposed in certain states for fiscal year 2013), particularly in the above-mentioned states, will not have a material adverse effect on our future results of operations.

In addition to changes in government reimbursement programs, our ability to negotiate favorable contracts with private payors, including managed care providers, significantly affects the revenues and operating results of our hospitals. Private payors, including managed care providers, increasingly are demanding that we accept lower rates of payment.

We expect continued third-party efforts to aggressively manage reimbursement levels and cost controls. Reductions in reimbursement amounts received from third-party payors could have a material adverse effect on our financial position and our results of operations.

A worsening of the economic and employment conditions in the United States could materially affect our business and future results of operations.

Our patient volumes, revenues and financial results depend significantly on the universe of patients with health insurance, which to a large extent is dependent on the employment status of individuals in our markets. A continuation or worsening of economic conditions may result in a continued increase in the unemployment rate which will likely increase the number of individuals without health insurance. As a result, our facilities may experience a decrease in patient volumes, particularly in less intense, more elective service lines, or a significant increase in services provided to uninsured patients. These factors could have a material unfavorable impact on our future patient volumes, revenues and operating results.

Our patient revenues and payor mix during the last few years were adversely affected by economic conditions, particularly in certain markets, such as Nevada, Texas and California, where a significant portion of our revenues are concentrated and unemployment rates remain high. In our acute care business, we experienced net revenue pressures caused primarily by declining commercial payor utilization and an increase in the number

Table of Contents

of uninsured and underinsured patients treated at our facilities. We can provide no assurance that these trends will not continue. During 2011, our revenues and payor mix within our acute care operations have been volatile making it difficult to predict the results for 2012 or thereafter.

In addition, we recorded approximately \$1.92 billion of goodwill as a result of our acquisition of PSI in November, 2010, and, as of December 31, 2011, we had approximately \$2.63 billion of goodwill recorded on our consolidated balance sheet. Should the revenues and financial results of our acute care and/or behavioral health care facilities be materially, unfavorably impacted due to, among other things, a worsening of the economic and employment conditions in the United States that could negatively impact our patient volumes and reimbursement rates, a continued rise in the unemployment rate and continued increases in the number of uninsured patients treated at our facilities, we may incur future charges to recognize impairment in the carrying value of our goodwill and other intangible assets, which could have a material adverse effect on our financial results.

Reductions or changes in Medicare funding could have a material adverse effect on our future results of operations.

On August 2, 2011, the Budget Control Act of 2011 (the 2011 Act) was enacted into law. The 2011 Act imposed annual spending limits for most federal agencies and programs aimed at reducing budget deficits by \$917 billion between 2012 and 2021, according to a report released by the Congressional Budget Office. The 2011 Act provides for new spending on program integrity initiatives intended to reduce fraud and abuse under the Medicare program. Among its other provisions, the law established a bipartisan Congressional committee, known as the Joint Select Committee on Deficit Reduction (the Joint Committee), which was tasked with making recommendations aimed at reducing future federal budget deficits by an additional \$1.5 trillion over 10 years. The Joint Committee was unable to reach an agreement by the November 23, 2011 deadline and, as a result, across-the-board cuts to discretionary, national defense and Medicare spending were implemented which, if triggered, would result in Medicare payment reductions of up to 2% per fiscal year with a uniform percentage reduction across all Medicare programs starting in 2013. We cannot predict whether Congress will attempt to suspend or restructure the automatic budget cuts or what other deficit reduction initiatives may be proposed by Congress.

We are subject to uncertainties regarding health care reform.

On March 23, 2010, President Obama signed into law the Patient Protection and Affordable Care Act (the PPACA). The Healthcare and Education Reconciliation Act of 2010 (the Reconciliation Act), which contains a number of amendments to the PPACA, was signed into law on March 30, 2010. Two primary goals of the PPACA, combined with the Reconciliation Act (collectively referred to as the Legislation), are to provide for increased access to coverage for healthcare and to reduce healthcare-related expenses.

Although it is expected that as a result of the Legislation there may be a reduction in uninsured patients, which should reduce our expense from uncollectible accounts receivable, the Legislation makes a number of other changes to Medicare and Medicaid which we believe may have an adverse impact on us. The Legislation revises reimbursement under the Medicare and Medicaid programs to emphasize the efficient delivery of high quality care and contains a number of incentives and penalties under these programs to achieve these goals. The Legislation provides for decreases in the annual market basket update for federal fiscal years 2010 through 2019, a productivity offset to the market basket update beginning October 1, 2011 for Medicare Part B reimbursable items and services and beginning October 1, 2012 for Medicare inpatient hospital services. The Legislation will reduce Medicare and Medicaid disproportionate share payments beginning in 2014, which would adversely impact the reimbursement we receive under these programs. The Legislation implements a value-based purchasing program, which will reward the delivery of efficient care. Conversely, certain facilities will receive reduced reimbursement for failing to meet quality parameters; such hospitals may include those with excessive readmission or hospital-acquired condition rates.

Table of Contents

The various provisions in the Legislation that directly or indirectly affect reimbursement are scheduled to take effect over a number of years. Legislation provisions are likely to be affected by the incomplete nature of implementing regulations or expected forthcoming interpretive guidance, gradual implementation, future legislation, and possible judicial nullification of all or certain provisions of the Legislation. Further Legislation provisions, such as those creating the Medicare Shared Savings Program and the Independent Payment Advisory Board, create certain flexibilities in how healthcare may be reimbursed by federal programs in the future. Thus, we cannot predict the impact of the Legislation on our future reimbursement at this time.

The Legislation also contains provisions aimed at reducing fraud and abuse in healthcare. The Legislation amends several existing laws, including the federal Anti-Kickback Statute and the False Claims Act, making it easier for government agencies and private plaintiffs to prevail in lawsuits brought against healthcare providers. While Congress had previously revised the intent requirement of the Anti-Kickback Statute to provide that a person is not required to have actual knowledge or specific intent to commit a violation of the Anti-Kickback Statute in order to be found guilty of violating such law, the Legislation also provides that any claims for items or services that violate the Anti-Kickback Statute are also considered false claims for purposes of the federal civil False Claims Act. The Legislation provides that a healthcare provider that retains an overpayment in excess of 60 days is subject to the federal civil False Claims Act. The Legislation also expands the Recovery Audit Contractor program to Medicaid. These amendments also make it easier for severe fines and penalties to be imposed on healthcare providers that violate applicable laws and regulations.

We have partnered with local physicians in the ownership of certain of our facilities. These investments have been permitted under an exception to the physician self-referral law. The Legislation permits existing physician investments in a hospital to continue under a grandfather clause if the arrangement satisfies certain requirements and restrictions, but physicians are prohibited, effective immediately, from increasing the aggregate percentage of their ownership in the hospital. The Legislation also imposes certain compliance and disclosure requirements upon existing physician-owned hospitals and restricts the ability of physician-owned hospitals to expand the capacity of their facilities.

The impact of the Legislation on each of our hospitals may vary. Because Legislation provisions are effective at various times over the next several years, we anticipate that many of the provisions in the Legislation may be subject to further revision or judicial nullification. Moreover, a number of state attorneys general are challenging the legality of certain aspects of the Legislation. Currently, rulings in separate Federal District Courts regarding the constitutionality of the Legislation have been split. These decisions are in the process of being appealed to the United States Supreme Court. We cannot predict the impact the Legislation may have on our business, results of operations, cash flow, capital resources and liquidity, the ultimate outcome of the judicial rulings or whether we will be able to successfully adapt to the changes required by the Legislation.

We are required to treat patients with emergency medical conditions regardless of ability to pay.

In accordance with our internal policies and procedures, as well as the Emergency Medical Treatment and Active Labor Act, or EMTALA, we provide a medical screening examination to any individual who comes to one of our hospitals while in active labor and/or seeking medical treatment (whether or not such individual is eligible for insurance benefits and regardless of ability to pay) to determine if such individual has an emergency medical condition. If it is determined that such person has an emergency medical condition, we provide such further medical examination and treatment as is required to stabilize the patient's medical condition, within the facility's capability, or arrange for transfer of such individual to another medical facility in accordance with applicable law and the treating hospital's written procedures. Our obligations under EMTALA may increase substantially going forward; CMS has recently sought stakeholder comments concerning the potential applicability of EMTALA to hospital inpatients and the responsibilities of hospitals with specialized capabilities, respectively. If the number of indigent and charity care patients with emergency medical conditions we treat increases significantly, or if regulations expanding our obligations to inpatients under EMTALA is proposed and adopted, our results of operations will be harmed.

Table of Contents

If we are not able to provide high quality medical care at a reasonable price, patients may choose to receive their health care from our competitors.

In recent years, the number of quality measures that hospitals are required to report publicly has increased. CMS publishes performance data related to quality measures and data on patient satisfaction surveys that hospitals submit in connection with the Medicare program. Federal law provides for the future expansion of the number of quality measures that must be reported. Additionally, the Legislation requires all hospitals to annually establish, update and make public a list of their standard charges for products and services. If any of our hospitals achieve poor results on the quality measures or patient satisfaction surveys (or results that are lower than our competitors) or if our standard charges are higher than our competitors, our patient volume could decline because patients may elect to use competing hospitals or other health care providers that have better metrics and pricing. This circumstance could harm our business and results of operations.

An increase in uninsured and underinsured patients in our acute care facilities or the deterioration in the collectability of the accounts of such patients could harm our results of operations.

Collection of receivables from third-party payors and patients is our primary source of cash and is critical to our operating performance. Our primary collection risks relate to uninsured patients and the portion of the bill that is the patient's responsibility, which primarily includes co-payments and deductibles. However, we also have substantial receivables due to us as of December 31, 2011 (a significant portion of which is past due) from certain state-based funding programs, most particularly Illinois. We estimate our provisions for doubtful accounts based on general factors such as payor mix, the agings of the receivables, historical collection experience and assessment of probability of future collections. We routinely review accounts receivable balances in conjunction with these factors and other economic conditions that might ultimately affect the collectability of the patient accounts and make adjustments to our allowances as warranted. Significant changes in business office operations, payor mix, economic conditions or trends in federal and state governmental health coverage could affect our collection of accounts receivable, cash flow and results of operations. If we experience unexpected increases in the growth of uninsured and underinsured patients or in bad debt expenses, our results of operations will be harmed.

Our hospitals face competition for patients from other hospitals and health care providers.

The healthcare industry is highly competitive, and competition among hospitals, and other healthcare providers for patients and physicians has intensified in recent years. In all of the geographical areas in which we operate, there are other hospitals that provide services comparable to those offered by our hospitals. Some of our competitors include hospitals that are owned by tax-supported governmental agencies or by nonprofit corporations and may be supported by endowments and charitable contributions and exempt from property, sales and income taxes. Such exemptions and support are not available to us.

In some markets, certain of our competitors may have greater financial resources, be better equipped and offer a broader range of services than we. The number of inpatient facilities, as well as outpatient surgical and diagnostic centers, many of which are fully or partially owned by physicians, in the geographic areas in which we operate has increased significantly. As a result, most of our hospitals operate in an increasingly competitive environment.

If our competitors are better able to attract patients, recruit physicians and other healthcare professionals, expand services or obtain favorable managed care contracts at their facilities, we may experience a decline in patient volume and our business may be harmed.

Our performance depends on our ability to recruit and retain quality physicians.

Typically, physicians are responsible for making hospital admissions decisions and for directing the course of patient treatment. As a result, the success and competitive advantage of our hospitals depends, in part, on the number and quality of the physicians on the medical staffs of our hospitals, the admitting practices of those physicians and our maintenance of good relations with those physicians. Physicians generally are not employees

Table of Contents

of our hospitals, and, in a number of our markets, physicians have admitting privileges at other hospitals in addition to our hospitals. They may terminate their affiliation with us at any time. If we are unable to provide high ethical and professional standards, adequate support personnel and technologically advanced equipment and facilities that meet the needs of those physicians, they may be discouraged from referring patients to our facilities and our results of operations may decline.

It may become difficult for us to attract and retain an adequate number of physicians to practice in certain of the non-urban communities in which our hospitals are located. Our failure to recruit physicians to these communities or the loss of physicians in these communities could make it more difficult to attract patients to our hospitals and thereby may have a material adverse effect on our business, financial condition and results of operations.

Generally, the top ten attending physicians within each of our facilities represent a large share of our inpatient revenues and admissions. The loss of one or more of these physicians, even if temporary, could cause a material reduction in our revenues, which could take significant time to replace given the difficulty and cost associated with recruiting and retaining physicians.

If we do not continually enhance our hospitals with the most recent technological advances in diagnostic and surgical equipment, our ability to maintain and expand our markets will be adversely affected.

The technology used in medical equipment and related devices is constantly evolving and, as a result, manufacturers and distributors continue to offer new and upgraded products to health care providers. To compete effectively, we must continually assess our equipment needs and upgrade when significant technological advances occur. If our facilities do not stay current with technological advances in the health care industry, patients may seek treatment from other providers and/or physicians may refer their patients to alternate sources, which could adversely affect our results of operations and harm our business.

If we fail to effectively and timely implement electronic health record systems, our operations could be harmed.

As required by HITECH, we are in the process of developing and implementing an incentive payment program for eligible hospitals and health care professionals that adopt and meaningfully use certified electronic health record technology. If our facilities or physicians are unable to meet the requirements for participation in the incentive payment program, we will not be eligible to receive incentive payments that could offset some of the costs of implementing an electronic health record system. Further, beginning in federal fiscal year 2015, eligible hospitals and professionals that fail to demonstrate meaningful use of certified electronic health record technology will be subject to reduced payments from Medicare. Any failure by us to effectively implement an electronic health record system in a timely manner could have an adverse effect on our results of operations.

Our performance depends on our ability to attract and retain qualified nurses and medical support staff and we face competition for staffing that may increase our labor costs and harm our results of operations.

We depend on the efforts, abilities, and experience of our medical support personnel, including our nurses, pharmacists and lab technicians and other healthcare professionals. We compete with other healthcare providers in recruiting and retaining qualified hospital management, nurses and other medical personnel.

The nationwide shortage of nurses and other medical support personnel has been a significant operating issue facing us and other healthcare providers. This shortage may require us to enhance wages and benefits to recruit and retain nurses and other medical support personnel or require us to hire expensive temporary personnel. In addition, in some markets like California, there are requirements to maintain specified nurse-staffing levels. To the extent we cannot meet those levels, we may be required to limit the healthcare services provided in these markets, which would have a corresponding adverse effect on our net operating revenues.

We cannot predict the degree to which we will be affected by the future availability or cost of attracting and retaining talented medical support staff. If our general labor and related expenses increase, we may not be able to

Table of Contents

raise our rates correspondingly. Our failure to either recruit and retain qualified hospital management, nurses and other medical support personnel or control our labor costs could harm our results of operations.

If we fail to comply with extensive laws and government regulations, we could suffer civil or criminal penalties or be required to make significant changes to our operations that could reduce our revenue and profitability.

The healthcare industry is required to comply with extensive and complex laws and regulations at the federal, state and local government levels relating to, among other things: hospital billing practices and prices for services; relationships with physicians and other referral sources; adequacy of medical care and quality of medical equipment and services; ownership of facilities; qualifications of medical and support personnel; confidentiality, maintenance, privacy and security issues associated with health-related information and patient medical records; the screening, stabilization and transfer of patients who have emergency medical conditions; certification, licensure and accreditation of our facilities; operating policies and procedures, and; construction or expansion of facilities and services.

Among these laws are the federal False Claims Act, the Health Insurance Portability and Accountability Act of 1996, or HIPAA, the federal anti-kickback statute and the provision of the Social Security Act commonly known as the Stark Law. These laws, and particularly the anti-kickback statute and the Stark Law, impact the relationships that we may have with physicians and other referral sources. We have a variety of financial relationships with physicians who refer patients to our facilities, including employment contracts, leases and professional service agreements. We also provide financial incentives, including minimum revenue guarantees, to recruit physicians into communities served by our hospitals. The Office of the Inspector General of the Department of Health and Human Services, or OIG, has enacted safe harbor regulations that outline practices that are deemed protected from prosecution under the anti-kickback statute. A number of our current arrangements, including financial relationships with physicians and other referral sources, may not qualify for safe harbor protection under the anti-kickback statute. Failure to meet a safe harbor does not mean that the arrangement necessarily violates the anti-kickback statute, but may subject the arrangement to greater scrutiny. We cannot assure that practices that are outside of a safe harbor will not be found to violate the anti-kickback statute. CMS recently published a Medicare self-referral disclosure protocol, which is intended to allow providers to self-disclose actual or potential violations of the Stark law. Because there are only a few judicial decisions interpreting the Stark law, there can be no assurance that our hospitals will not be found in violation of the Stark law or that self-disclosure of a potential violation would result in reduced penalties.

Federal regulations issued under HIPAA contain provisions that require us to implement and, in the future, may require us to implement additional costly electronic media security systems and to adopt new business practices designed to protect the privacy and security of each of our patient's health and related financial information. Such privacy and security regulations impose extensive administrative, physical and technical requirements on us, restrict our use and disclosure of certain patient health and financial information, provide patients with rights with respect to their health information and require us to enter into contracts extending many of the privacy and security regulatory requirements to third parties that perform duties on our behalf.

These laws and regulations are extremely complex, and, in many cases, we do not have the benefit of regulatory or judicial interpretation. In the future, it is possible that different interpretations or enforcement of these laws and regulations could subject our current or past practices to allegations of impropriety or illegality or could require us to make changes in our facilities, equipment, personnel, services, capital expenditure programs and operating expenses. A determination that we have violated one or more of these laws (see *Item 3-Legal Proceedings*), or the public announcement that we are being investigated for possible violations of one or more of these laws, could have a material adverse effect on our business, financial condition or results of operations and our business reputation could suffer significantly. In addition, we cannot predict whether other legislation or regulations at the federal or state level will be adopted, what form such legislation or regulations may take or what their impact on us may be. See *Item 1 Business Self-Referral and Anti-Kickback Legislation*.

If we are deemed to have failed to comply with the anti-kickback statute, the Stark Law or other applicable laws and regulations, we could be subjected to liabilities, including criminal penalties, civil penalties (including the loss of our licenses to operate one or more facilities), and exclusion of one or more facilities from

Table of Contents

participation in the Medicare, Medicaid and other federal and state healthcare programs. The imposition of such penalties could have a material adverse effect on our business, financial condition or results of operations.

We may be subject to liabilities from claims brought against our facilities.

We are subject to medical malpractice lawsuits, product liability lawsuits, class action lawsuits and other legal actions in the ordinary course of business. Some of these actions may involve large claims, as well as significant defense costs. We cannot predict the outcome of these lawsuits or the effect that findings in such lawsuits may have on us. All professional and general liability insurance we purchase is subject to policy limitations. We believe that, based on our past experience and actuarial estimates, our insurance coverage is adequate considering the claims arising from the operations of our hospitals. While we continuously monitor our coverage, our ultimate liability for professional and general liability claims could change materially from our current estimates. If such policy limitations should be partially or fully exhausted in the future, or payments of claims exceed our estimates or are not covered by our insurance, it could have a material adverse effect on our operations.

We may be subject to governmental investigations, regulatory actions and whistleblower lawsuits

The federal False Claims Act permits private parties to bring qui tam, or whistleblower, lawsuits against companies. Whistleblower provisions allow private individuals to bring actions on behalf of the government alleging that the defendant has defrauded the federal government. Because qui tam lawsuits are filed under seal, we could be named in one or more such lawsuits of which we are not aware.

If any of our existing health care facilities lose their accreditation or any of our new facilities fail to receive accreditation, such facilities could become ineligible to receive reimbursement under Medicare or Medicaid.

The construction and operation of healthcare facilities are subject to extensive federal, state and local regulation relating to, among other things, the adequacy of medical care, equipment, personnel, operating policies and procedures, fire prevention, rate-setting and compliance with building codes and environmental protection. Additionally, such facilities are subject to periodic inspection by government authorities to assure their continued compliance with these various standards.

All of our hospitals are deemed certified, meaning that they are accredited, properly licensed under the relevant state laws and regulations and certified under the Medicare program. The effect of maintaining certified facilities is to allow such facilities to participate in the Medicare and Medicaid programs. We believe that all of our healthcare facilities are in material compliance with applicable federal, state, local and other relevant regulations and standards. However, should any of our healthcare facilities lose their deemed certified status and thereby lose certification under the Medicare or Medicaid programs, such facilities would be unable to receive reimbursement from either of those programs and our business could be materially adversely effected.

Our level of indebtedness that we incurred in connection with the acquisition of PSI could adversely affect our ability to raise additional capital to fund our operations, limit our ability to react to changes in the economy or our industry and prevent us from meeting our obligations under the agreements relating to our indebtedness.

Our level of indebtedness that we incurred in connection with the acquisition of PSI could adversely affect our ability to raise additional capital to fund our operations, limit our ability to react to changes in the economy or our industry and could potentially prevent us from meeting our obligations under the agreements relating to our indebtedness.

In connection with the consummation of our acquisition of PSI, in addition to previously existing outstanding debt commitments and undertaking a \$250 million offering of notes in September, 2010, we obtained a debt financing commitment of \$3.45 billion under a senior credit facility consisting of an \$800 million revolving credit facility, a \$1.05 billion term loan A facility and a \$1.6 billion term loan B facility. The senior credit facility became effective upon closing of the acquisition of PSI, which occurred in November, 2010. We also obtained an amended \$240 million accounts receivable securitization facility during 2010 (increased from \$200 million).

As of December 31, 2011, after giving effect to the use of proceeds from the various debt financing sources mentioned above, and after giving effect to our 2011 consolidated results of operations and cash flows, our total

Table of Contents

debt was \$3.65 billion and we had \$482 million of unused borrowing capacity under our senior credit and accounts receivable securitization facilities, after taking into account \$69 million of outstanding letters of credit and \$9 million of outstanding borrowings pursuant to our short-term, on-demand note.

Subject to the limits contained in the credit agreement governing our senior credit facility, the indenture that governs the notes and our other debt instruments, we may be able to incur substantial additional debt from time to time to finance working capital, capital expenditures, investments or acquisitions, or for other purposes. If we do so, the risks related to our high level of debt could intensify. Our leverage could result in unfavorable impact on us, including the following:

it may limit our ability to obtain additional debt or equity financing for working capital, capital expenditures, debt service requirements, acquisitions and general corporate or other purposes;

a substantial portion of our cash flows from operations will be dedicated to the payment of principal and interest on our indebtedness and will not be available for other purposes, including our operations, capital expenditures and future business opportunities;

some of our borrowings, including borrowings under the credit facilities, are at variable rates of interest, exposing us to the risk of increased interest rates;

it may limit our ability to adjust to changing market conditions and place us at a competitive disadvantage compared to our competitors that have less debt, and;

we may be vulnerable in a downturn in general economic conditions or in our business, or we may be unable to carry out capital spending that is important to our operations.

Our growth strategy depends, in part, on acquisitions, and we may not be able to continue to acquire hospitals that meet our target criteria. We may also have difficulties acquiring hospitals from not-for-profit entities due to regulatory scrutiny.

Acquisitions of hospitals in select markets are a key element of our growth strategy. We face competition for acquisition candidates primarily from other for-profit healthcare companies, as well as from not-for-profit entities. Some of our competitors have greater resources than we do. Also, suitable acquisitions may not be accomplished due to unfavorable terms.

In addition, many states have enacted, or are considering enacting, laws that affect the conversion or sale of not-for-profit hospitals to for-profit entities. These laws generally require prior approval from the state attorney general, advance notification and community involvement. In addition, attorneys general in states without specific conversion legislation may exercise discretionary authority over such transactions. Although the level of government involvement varies from state to state, the trend is to provide for increased governmental review and, in some cases, approval of a transaction in which a not-for-profit entity sells a healthcare facility to a for-profit entity. The adoption of new or expanded conversion legislation, increased review of not-for-profit hospital conversions or our inability to effectively compete against other potential purchasers could make it more difficult for us to acquire additional hospitals, increase our acquisition costs or make it difficult for us to acquire hospitals that meet our target acquisition criteria, any of which could adversely affect our growth strategy and results of operations.

Further, the cost of an acquisition could result in a dilutive effect on our results of operations, depending on various factors, including the amount paid for the acquisition, the acquired hospital's results of operations, allocation of the purchase price, effects of subsequent legislation and limits on rate increases.

We may fail to improve or integrate the operations of the hospitals we acquire, which could harm our results of operations and adversely affect our growth strategy.

We may be unable to timely and effectively integrate the hospitals that we acquire with our ongoing operations. We may experience delays in implementing operating procedures and systems in newly acquired

Table of Contents

hospitals. Integrating a new hospital could be expensive and time consuming and could disrupt our ongoing business, negatively affect cash flow and distract management and other key personnel. In addition, acquisition activity requires transitions from, and the integration of, operations and, usually, information systems that are used by acquired hospitals. In addition, some of the hospitals we acquire had significantly lower operating margins than the hospitals we operate prior to the time of our acquisition. If we fail to improve the operating margins of the hospitals we acquire, operate such hospitals profitably or effectively integrate the operations of acquired hospitals, our results of operations could be harmed.

If we acquire hospitals with unknown or contingent liabilities, we could become liable for material obligations.

Hospitals that we acquire may have unknown or contingent liabilities, including, but not limited to, liabilities for failure to comply with applicable laws and regulations. Although we typically attempt to exclude significant liabilities from our acquisition transactions and seek indemnification from the sellers of such hospitals for these matters, we could experience difficulty enforcing those obligations or we could incur material liabilities for the past activities of hospitals we acquire. Such liabilities and related legal or other costs and/or resulting damage to a facility's reputation could harm our business.

Our subsidiary, PSI, and its subsidiaries, are subject to pending legal actions, governmental investigations and regulatory actions.

Our subsidiary, PSI, and its subsidiaries, are subject to pending legal actions, governmental investigations and regulatory actions (see *Item 3-Legal Proceedings*).

State efforts to regulate the construction or expansion of health care facilities could impair our ability to expand.

Many of the states in which we operate hospitals have enacted Certificates of Need, or CON, laws as a condition prior to hospital capital expenditures, construction, expansion, modernization or initiation of major new services. Our failure to obtain necessary state approval could result in our inability to complete a particular hospital acquisition, expansion or replacement, make a facility ineligible to receive reimbursement under the Medicare or Medicaid programs, result in the revocation of a facility's license or impose civil or criminal penalties on us, any of which could harm our business.

In addition, significant CON reforms have been proposed in a number of states that would increase the capital spending thresholds and provide exemptions of various services from review requirements. In the past, we have not experienced any material adverse effects from those requirements, but we cannot predict the impact of these changes upon our operations.

Controls designed to reduce inpatient services may reduce our revenues.

Controls imposed by third-party payors designed to reduce admissions and lengths of stay, commonly referred to as utilization review, have affected and are expected to continue to affect our facilities. Utilization review entails the review of the admission and course of treatment of a patient by managed care plans. Inpatient utilization, average lengths of stay and occupancy rates continue to be negatively affected by payor-required preadmission authorization and utilization review and by payor pressure to maximize outpatient and alternative healthcare delivery services for less acutely ill patients. Efforts to impose more stringent cost controls are expected to continue. Although we cannot predict the effect these changes will have on our operations, significant limits on the scope of services reimbursed and on reimbursement rates and fees could have a material adverse effect on our business, financial position and results of operations.

Table of Contents

Fluctuations in our operating results, quarter to quarter earnings and other factors may result in decreases in the price of our common stock.

The stock markets have experienced volatility that has often been unrelated to operating performance. These broad market fluctuations may adversely affect the trading price of our common stock and, as a result, there may be significant volatility in the market price of our common stock. If we are unable to operate our hospitals as profitably as we have in the past or as our stockholders expect us to in the future, the market price of our common stock will likely decline as stockholders could sell shares of our common stock when it becomes apparent that the market expectations may not be realized.

In addition to our operating results, many economic and seasonal factors outside of our control could have an adverse effect on the price of our common stock and increase fluctuations in our quarterly earnings. These factors include certain of the risks discussed herein, demographic changes, operating results of other hospital companies, changes in our financial estimates or recommendations of securities analysts, speculation in the press or investment community, the possible effects of war, terrorist and other hostilities, adverse weather conditions, the level of seasonal illnesses, managed care contract negotiations and terminations, changes in general conditions in the economy or the financial markets, or other developments affecting the health care industry.

We are subject to significant corporate regulation as a public company and failure to comply with all applicable regulations could subject us to liability or negatively affect our stock price.

As a publicly traded company, we are subject to a significant body of regulation, including the Sarbanes-Oxley Act of 2002. While we have developed and instituted a corporate compliance program based on what we believe are the current best practices in corporate governance and continue to update this program in response to newly implemented or changing regulatory requirements, we cannot provide assurance that we are or will be in compliance with all potentially applicable corporate regulations. For example, we cannot provide assurance that, in the future, our management will not find a material weakness in connection with its annual review of our internal control over financial reporting pursuant to Section 404 of the Sarbanes-Oxley Act. We also cannot provide assurance that we could correct any such weakness to allow our management to assess the effectiveness of our internal control over financial reporting as of the end of our fiscal year in time to enable our independent registered public accounting firm to state that such assessment will have been fairly stated in our Annual Report on Form 10-K or state that we have maintained effective internal control over financial reporting as of the end of our fiscal year. If we fail to comply with any of these regulations, we could be subject to a range of regulatory actions, fines or other sanctions or litigation. If we must disclose any material weakness in our internal control over financial reporting, our stock price could decline.

A cyber security incident could cause a violation of HIPAA, breach of member privacy, or other negative impacts.

A cyber-attack that bypasses our information technology (IT) security systems causing an IT security breach, loss of protected health information or other data subject to privacy laws, loss of proprietary business information, or a material disruption of our IT business systems, could have a material adverse impact on our business and result of operations. In addition, our future results of operations, as well as our reputation, could be adversely impacted by theft, destruction, loss, or misappropriation of public health information, other confidential data or proprietary business information.

Different interpretations of accounting principles could have a material adverse effect on our results of operations or financial condition.

Generally accepted accounting principles are complex, continually evolving and may be subject to varied interpretation by us, our independent registered public accounting firm and the SEC. Such varied interpretations could result from differing views related to specific facts and circumstances. Differences in interpretation of generally accepted accounting principles could have a material adverse effect on our financial position or results of operations.

Table of Contents

We continue to see rising costs in construction materials and labor. Such increased costs could have an adverse effect on the cash flow return on investment relating to our capital projects.

The cost of construction materials and labor has significantly increased. As we continue to invest in modern technologies, emergency rooms and operating room expansions, the construction of medical office buildings for physician expansion and reconfiguring the flow of patient care, we spend large amounts of money generated from our operating cash flow or borrowed funds. In addition, we have a commitment with an unrelated third party to build a newly constructed facility with a specified minimum number of beds and services. Although we evaluate the financial feasibility of such projects by determining whether the projected cash flow return on investment exceeds our cost of capital, such returns may not be achieved if the cost of construction continues to rise significantly or the expected patient volumes are not attained.

The deterioration of credit and capital markets may adversely affect our access to sources of funding and we cannot be certain of the availability and terms of capital to fund the growth of our business when needed.

We require substantial capital resources to fund our acquisition growth strategy and our ongoing capital expenditure programs for renovation, expansion, construction and addition of medical equipment and technology. We believe that our capital expenditure program is adequate to expand, improve and equip our existing hospitals. We cannot predict, however, whether financing for our growth plans and capital expenditure programs will be available to us on satisfactory terms when needed, which could harm our business.

To fund all or a portion of our future financing needs, we rely on borrowings from various sources including fixed rate, long-term debt as well as borrowings pursuant to our revolving credit facility and accounts receivable securitization program. If any of the lenders were unable to fulfill their future commitments, our liquidity could be impacted, which could have a material unfavorable impact our results of operations and financial condition.

In addition, global capital markets have experienced volatility that has tightened access to capital markets and other sources of funding. In the event we need to access the capital markets or other sources of financing, there can be no assurance that we will be able to obtain financing on acceptable terms or within an acceptable time. Our inability to obtain financing on terms acceptable to us could have a material unfavorable impact on our results of operations, financial condition and liquidity.

We depend heavily on key management personnel and the departure of one or more of our key executives or a significant portion of our local hospital management personnel could harm our business.

The expertise and efforts of our senior executives and key members of our local hospital management personnel are critical to the success of our business. The loss of the services of one or more of our senior executives or of a significant portion of our local hospital management personnel could significantly undermine our management expertise and our ability to provide efficient, quality healthcare services at our facilities, which could harm our business.

The number of outstanding shares of our Class B Common Stock is subject to potential increases or decreases.

At December 31, 2011, 31.2 million shares of Class B Common Stock were reserved for issuance upon conversion of shares of Class A, C and D Common Stock outstanding, for issuance upon exercise of options to purchase Class B Common Stock and for issuance of stock under other incentive plans. Class A, C and D Common Stock are convertible on a share for share basis into Class B Common Stock. To the extent that these shares were converted into or exercised for shares of Class B Common Stock, the number of shares of Class B Common Stock available for trading in the public market place would increase substantially and the holders of Class B Common Stock would own a smaller percentage of that class.

Table of Contents

In addition, from time-to-time our Board of Directors approve stock repurchase programs authorizing us to purchase shares of our Class B Common Stock on the open market at prevailing market prices or in negotiated transactions off the market. Such repurchases decrease the number of outstanding shares of our Class B Common Stock. Conversely, as a potential means of generating additional funds to operate and expand our business, we may from time-to-time issue equity through the sale of stock which would increase the number of outstanding shares of our Class B Common Stock. Based upon factors such as, but not limited to, the market price of our stock, interest rate on borrowings and uses or potential uses for cash, repurchase or issuance of our stock could have a dilutive effect on our future basic and diluted earnings per share.

The right to elect the majority of our Board of Directors and the majority of the general shareholder voting power resides with the holders of Class A and C Common Stock, the majority of which is owned by Alan B. Miller, our Chief Executive Officer and Chairman of our Board of Directors.

Our Restated Certificate of Incorporation provides that, with respect to the election of directors, holders of Class A Common Stock vote as a class with the holders of Class C Common Stock, and holders of Class B Common Stock vote as a class with holders of Class D Common Stock, with holders of all classes of our Common Stock entitled to one vote per share.

As of March 31, 2011, the shares of Class A and Class C Common Stock constituted 7.5% of the aggregate outstanding shares of our Common Stock, had the right to elect six members of the Board of Directors and constituted 87.2% of our general voting power. As of March 31, 2011, the shares of Class B and Class D Common Stock (excluding shares issuable upon exercise of options) constituted 92.5% of the outstanding shares of our Common Stock, had the right to elect two members of the Board of Directors and constituted 12.8% of our general voting power.

As to matters other than the election of directors, our Restated Certificate of Incorporation provides that holders of Class A, Class B, Class C and Class D Common Stock all vote together as a single class, except as otherwise provided by law.

Each share of Class A Common Stock entitles the holder thereof to one vote; each share of Class B Common Stock entitles the holder thereof to one-tenth of a vote; each share of Class C Common Stock entitles the holder thereof to 100 votes (provided the holder of Class C Common Stock holds a number of shares of Class A Common Stock equal to ten times the number of shares of Class C Common Stock that holder holds); and each share of Class D Common Stock entitles the holder thereof to ten votes (provided the holder of Class D Common Stock holds a number of shares of Class B Common Stock equal to ten times the number of shares of Class D Common Stock that holder holds).

In the event a holder of Class C or Class D Common Stock holds a number of shares of Class A or Class B Common Stock, respectively, less than ten times the number of shares of Class C or Class D Common Stock that holder holds, then that holder will be entitled to only one vote for every share of Class C Common Stock, or one-tenth of a vote for every share of Class D Common Stock, which that holder holds in excess of one-tenth the number of shares of Class A or Class B Common Stock, respectively, held by that holder. The Board of Directors, in its discretion, may require beneficial owners to provide satisfactory evidence that such owner holds ten times as many shares of Class A or Class B Common Stock as Class C or Class D Common Stock, respectively, if such facts are not apparent from our stock records.

Since a substantial majority of the Class A shares and Class C shares are controlled by Mr. Alan B. Miller and members of his family who are also directors and officers of our company, and they can elect a majority of our company's directors and effect or reject most actions requiring approval by stockholders without the vote of any other stockholders, there are potential conflicts of interest in overseeing the management of our company.

In addition, because this concentrated control could discourage others from initiating any potential merger, takeover or other change of control transaction that may otherwise be beneficial to our businesses, our business and prospects and the trading price of our securities could be adversely affected.

- (1) Desert Springs Hospital, Summerlin Hospital Medical Center, Valley Hospital Medical Center, Spring Valley Hospital Medical Center and Centennial Hills Hospital Medical Center are owned by limited liability companies (LLCs) in which we hold controlling, majority ownership interests of approximately 72%. The remaining minority ownership interests in these facilities are held by unaffiliated third-parties. All hospitals are managed by us.
 - (2) We hold an 80% ownership interest in this facility through a general partnership interest in a limited partnership. The remaining 20% ownership interest is held by an unaffiliated third-party.
 - (3) Real property leased from Universal Health Realty Income Trust.
 - (4) In October, 2007, the licenses for Edinburg Regional Medical Center, Edinburg Children s Hospital, McAllen Medical Center, McAllen Heart Hospital and South Texas Behavioral Health Center were consolidated under one license operating as the South Texas Health System.
 - (5) We manage and own a noncontrolling interest of approximately 50% in the entity that operates this facility.
 - (6) We own a majority interest in an LLC that owns and operates this center.
 - (7) We own minority interests in an LLC that owns and operates this center which is managed by a third-party.
 - (8) We own a noncontrolling ownership interest of approximately 50% in the entity that operates this facility that is managed by a third-party.
 - (9) We hold an 89% ownership interest in this facility through both general and limited partnership interests. The remaining 11% ownership interest is held by unaffiliated third parties.
 - (10) These facilities were acquired by us in November, 2010 in connection with our acquisition of PSI.
- We own or lease medical office buildings adjoining some of our hospitals. We believe that the leases on the facilities, medical office buildings and other real estate leased or owned by us do not impose any material limitation on our operations. The aggregate lease payments on facilities leased by us were \$55 million in 2011, \$45 million in 2010 and \$41 million in 2009.

Table of Contents**ITEM 3. Legal Proceedings***U.S. v. Marion and UHS:*

In November, 2009, the United States Department of Justice (DOJ) and the Virginia Attorney General intervened in a qui tam case that had been filed by former employees of Marion Youth Center under seal in 2007 against Universal Health Services, Inc. (UHS), and Keystone Marion, LLC (Marion) and Keystone Education and Youth Services, LLC (Keystone). The intervention by the DOJ followed the issuance of a series of subpoenas from the Office of the Inspector General for the Department of Health and Human Services seeking documents related to the treatment of Medicaid beneficiaries at Marion. The amended complaint filed by the DOJ and Virginia Attorney General alleged causes of action pursuant to the federal and state false claims acts and the Virginia fraud statute. The former employees filed a separate amended complaint alleging employment and retaliation claims as well as false claim act violations. During the third quarter of 2011, we reached an agreement in principle to settle all of the claims. We have established a reserve in connection with this matter which did not have a material impact on our results of operations for any of the periods presented herein. Should we be unable to finalize a definitive settlement agreement in this matter, we will continue to defend ourselves vigorously against the government's and the former employees' allegations. There can be no assurance that we will prevail should this matter be litigated.

Martin v. UHS of Delaware:

UHS of Delaware, Inc., a wholly-owned subsidiary of ours, has been named as defendants in a state False Claim Act case in Sacramento County Superior Court. Plaintiffs are a former student and employees of the Elmira School who claim that the UHS schools in California unlawfully retained public education funding from the state of California for the operation of these schools but failed to meet state requirements pertaining to the operation of non-public schools. We deny liability and intend to defend this case vigorously. We have established a reserve in connection with this matter which did not have a material impact on our consolidated financial statements.

Department of Justice ICD Investigation:

In September, 2010, we, along with many other companies in the healthcare industry, received a letter from the United States Department of Justice (DOJ) advising of a False Claim Act investigation being conducted in connection with the implantation of implantable cardioverter defibrillators (ICDs) from 2003 to the present at several of our acute care facilities. The DOJ alleges that ICDs were implanted and billed by our facilities in contravention of a National Claims Determination regarding these devices. We have established a reserve in connection with this matter which did not have a material impact on our consolidated financial statements.

Two Rivers Psychiatric Hospital:

On April 11, 2011, the Centers for Medicare and Medicaid Services (CMS) issued notice of its decision terminating Two Rivers Psychiatric Hospital (Two Rivers) in Kansas City, Missouri from participation in the Medicare and Medicaid program. The termination notice was issued as a result of surveys conducted which allegedly found Two Rivers to be out of compliance with the conditions of participation required for participation in the Medicare program and for Two Rivers' alleged failure to alleviate an immediate jeopardy situation. Two Rivers filed an administrative appeal with the U.S. Department of Health and Human Services, Departmental Appeal Board, Civil Remedies Division, seeking review and reversal of that decision. In addition, Two Rivers filed a complaint in the U.S. District Court for the Western District of Missouri seeking a temporary restraining order and preliminary injunction against CMS rescinding the termination action. On April 22, 2011, the District Court issued a temporary restraining order abating the termination action pending a preliminary injunction hearing or an agreement with CMS. On May 17, 2011, Two Rivers and CMS entered into a settlement agreement which resulted in the rescission of the termination notice and actions by CMS. Pursuant to the terms of the agreement, Two Rivers was required to submit an acceptable plan of correction relative to the immediate jeopardy citation and engage independent experts in various disciplines to analyze and develop implementation plans for Two Rivers to meet the applicable Medicare conditions of participation. Both of these actions have

Table of Contents

occurred. CMS will conduct an initial survey of Two Rivers, expected to occur in early 2012, to determine if the Medicare conditions of participation have been met. During the term of this agreement, Two Rivers remains eligible to receive reimbursements for services rendered to Medicare and Medicaid beneficiaries. Two Rivers remains fully committed to providing high-quality healthcare to their patients and the community it serves. We therefore intend to work expeditiously and collaboratively with CMS in an effort to resolve these matters. We can provide no assurance that Two Rivers will not ultimately lose its Medicare certification. The operating results of Two Rivers did not have a material impact on our consolidated results of operations or financial condition for the years ended December 31, 2011 or 2010.

Matters Relating to PSI:

The following matters pertain to PSI or former PSI facilities (owned by subsidiaries of Psychiatric Solutions, Inc.) for which we have assumed the defense as a result of our acquisition of PSI which was completed in November, 2010:

Garden City Employees Retirement System v. PSI:

This is a purported shareholder class action lawsuit filed in the United States District Court for the Middle District of Tennessee against PSI and the former directors in 2009 alleging violations of federal securities laws. We intend to defend the case vigorously. Should we be deemed liable in this matter, we believe we would be entitled to commercial insurance recoveries for amounts paid by us, subject to certain limitations and deductibles. Included in our consolidated balance sheet as of December 31, 2011, is an estimated reserve (current liability) and corresponding commercial insurance recovery (current asset) which did not have a material impact on our financial statements. Although we believe the commercial insurance recoveries are adequate to satisfy potential liability in this matter, we can provide no assurance that the ultimate liability will not exceed the commercial insurance recoveries which would make us liable for the excess.

Department of Justice Investigation of Sierra Vista:

In 2009, Sierra Vista Hospital in Sacramento, California learned of an investigation by the U.S. Department of Justice (DOJ) relating to Medicare services provided by the facility. The DOJ ultimately notified the facility that with respect to partial hospitalization and outpatient services, the DOJ believed that the medical record documentation did not adequately support the claims submitted for reimbursement by Medicare. We reached a tentative financial settlement with the DOJ which is subject to the negotiation of a definitive settlement agreement. As part of that agreement, the facility will be subject to a corporate integrity agreement. The reserve established in connection with this matter did not have a material impact on our consolidated financial statements.

Department of Justice Investigation of Friends Hospital:

In October, 2010, Friends Hospital in Philadelphia, Pennsylvania, received a subpoena from the DOJ requesting certain documents from the facility. The requested documents have been collected and provided to the DOJ for review and examination. Another subpoena was issued to the facility in July 2011 requesting additional documents. Those documents are being collected and will be provided to the DOJ. At present, we are uncertain as to the focus, scope or extent of the investigation, liability of the facility and/or potential financial exposure, if any, in connection with this matter.

Department of Justice Investigation of Riveredge Hospital:

In 2008, Riveredge Hospital in Chicago, Illi
