TABLE OF CONTENTS Chief Executive's Review Safety and Health report Operational review 10 12 21

CHIEF EXECUTIVE'S REVIEW

Harmony is and has always been about value creation. Our strategy over the last 10 years may have had different applications, as

changing market conditions may have dictated, but we have stayed true to our overarching objective of building a world-class

gold mining company. A company that is passionately driven to create more value in everything we do than any of our competitors.

Allow me to expand a little on the above, by tracing the thread of Harmony's value creation in each of the following scenarios:

By creating and applying a business model that enabled us to reduce cost per tonne on new acquisitions, we turned around the original Harmony and successfully acquired the "throwaway" South African assets of AngloGold Ashanti, ICI

Gengold and Gold Fields. In so doing we upgraded and expanded our reserve base.

Being contrarian, we pursued an acquisition strategy in South Africa when no one else did. The result? Unbelievably cheap

mining assets. Even more exciting, extraordinarily cheap (in some cases "free") projects.

When the acquisition game no longer presented value, as it inevitably would, we shifted the focus to unlocking latent value from the cheaply acquired projects. The skills required to develop these projects into new mines and bring them on

stream are substantial as is the commitment required to the long time horizon and significant capital expenditure. We truly believe that this is the foundation of Harmony of the future, so we have invested in building capacity which can handle major projects both in South Africa and PNG.

Integral to mine design and construction is exploration, thus it is no surprise that we found ourselves taking the next logical step into exploration. How do you create value in exploration? In PNG alone we have created potentially over

billion dollars worth of value by confirming and enhancing gold ounces and copper pounds within our lease areas. What has the strategy of value creation we have pursued over the last 10 years rendered to us today? A world-class gold mining company with:

a portfolio of assets of mixed quality in mining-friendly countries;

the best and lowest cost project pipeline;

the largest resource base in the world of gold mining.

Our value creation strategy remains our "True North". Whatever the prevailing market conditions, we look for the opportunity

to create value. We don't see the value creation opportunity in the current crazy phase of consolidation with assets fetching

ridiculous prices. On the contrary, not pursuing value-destroying acquisitions has allowed us to address the challenge of

unlocking value in our existing assets.

Value creation applied to our existing assets means the following:

More consistent performance. This is progressing well as is evident from the further significant improvements in our development rates.

Upgrading our portfolio. This is continuing as we make headway with our new mines. During the last six years we have

invested significantly in our existing and future ore bodies and we are now at the exciting point where we can start harvesting the benefits. Over the next four years we will bring some 1,5 million quality low-cost ounces on stream. With

the parallel strategy of reducing our exposure to some of our existing lower quality, higher cost or shorter life assets, we

will complete the transformation of Harmony into a world-class gold company. The current cycle of operational planning

will form the basis by which we will determine whether an asset or shaft fits the profile of the company we want to be. The Internal Harmony Improvement Platform (HIP) as well as the cleaning up of our non-mining portfolio, through the

Harmony of Tomorrow (HOT) initiative, dovetails perfectly with the overall strategy.

However, in the shorter term, we experienced mixed fortunes at our operations during the second quarter ending December 2006.

Our leveraged assets posted sound operational and financial results through increased tonnages and good cost containment.

The growth assets – lead by a strong performance from the Elandsrand new mine project – delivered solid production, higher

grades and good cost control. Most of our quality assets, on the other hand, reported lower performance for the quarter with

reduced tonnages, lower yields and therefore higher unit cash costs, despite good cost containment.

P

"The Group's higher unit costs for the quarter are a result of lower yields from most of our quality mines and are

frustrating at a time when we are harnessing all efforts to reduce costs. Over the next six months, we will continue

to develop at these significantly higher levels in order to create sufficient available face length which will not only

enable us to increase grades by some 10% to 15%, but will also put us in a position where we will have more consistent production results. This should enable us to reduce unit costs and improved performance."

Harmony's cash operating profit declined by 15.3% to R755 million (R891 million). Headline earnings for the December 2006

quarter decreased to 44 cents per share compared with 66 cents per share for the September 2006 quarter.

Our South African underground operations reported a decrease in production of 4%. Recovery grades declined by 4.4% from

5.0g/t in the previous quarter to 4.8g/t in the December 2006 quarter contributing to a higher cash operating cost of R104 056/kg (R98 302/kg).

Yields decreased by 5.1% to 2.43g/t during the December 2006 quarter at our Australian operations and production was 7.9%

lower from 2 049kg to 1 888kg.

Harmony experienced a busy quarter with a number of corporate financial activities taking place. At the beginning of the

quarter, Harmony sold the entire infrastructure of Randfontein No. 4 shaft for a total consideration of R55 million. On 1 December 2006, Harmony accepted Gold Fields' offer of 35 GFI shares for every 100 Western Areas shares held. Harmony

had acquired the 29.2% stake (44 985 939 shares) in Western Areas at a cost of R44.23 per share on 9 March 2006. The

investment was carried at fair value of R42.01 per share in Harmony's books. The proceeds on the share conversion amounts

to R47.26 per Western Areas share, resulting in a profit before tax of R5.25 per Western Areas share.

During the December 2006 quarter, Harmony settled 50 000 ounces of hedged forward positions at a cost of R82.9 million

(A\$14.7 million). Another 42 000 ounces will be settled in the March 2007 quarter.

Hidden Valley and Westpac Bank PNG Ltd concluded a US\$31 million fleet financing facility and a master lease agreement has

been signed. The funding is available for a period of five years after delivery of the equipment. The facility will carry interest at

Libor plus 1.25% until 95% of budgeted production is reached, thereafter the rate will decrease to Libor plus 0.80%.

A 15% deposit on all equipment ordered is payable, with the remaining portion funded by the lease agreement.

The positive labour relations with our union, NUM, has led to a two-year Conops agreement being signed for all Harmony's

mines where

Conops

is implemented and an undertaking was received that the union would support our application to the Minister of Mines for permission to work on Sundays.

Last year, Harmony launched the HOT strategy which examines ways and methods of turning liabilities or under-utilised assets

into immediate or future value for all stakeholders. The disposal of the Randfontein No. 4 shaft surface infrastructure and shaft

is a good example. We are also in advanced negotiations with regards to the disposal of Deelkraal's surface infrastructure. These

unused assets typically sit in our books as significant closure liabilities. The HOT concept has, so far, been implemented in five

business areas, namely property, exploitation of by-products, water, rehabilitation and intellectual property. Initial results of HOT have illustrated that the areas with the potential for quick savings are the property and by-product

exploitation businesses. To this end, we have incorporated a property as well as a rehabilitation company to accelerate the cost-

saving process and realise value. We are fast-tracking the capex to increase our gravity recovery circuits at most of our South

African plants in order to increase our osmiridium recovery and further reduce our treatment costs. We have also finalised a

detailed plan to include uranium in our resource declaration by June 2007. A drilling programme running concurrent with the

Mega Dump pre-feasibility programme has commenced to confirm both gold and uranium values. Harmony anticipates that

approval of a number of surface prospecting licenses will be obtained in the short term.

The HIP was successfully implemented across all our South African operations. HIP is aimed at addressing the improvement of

efficiencies throughout the group through the implementation of best practices as well as new ideas to reduce costs and

improve performance. This can be seen as the logical extension of our Services Transformation Project (STP) through which we

have, over the last 18 months, significantly improved internal service levels and achieved audited savings of just over R200 million.

P

Real benefits associated with the HIP programme are already evident at Masimong, Brand, Unisel and St Helena from more

efficient mining and productivity.

Net annualised value of the ideas currently being implemented is slightly more than R400 million. Over the next 12 months we

should be in a better position to evaluate our conversion rate from idea to real improvements or savings, both in terms of

quantum and time it takes to realise benefits.

SAFETY AND HEALTH REPORT

Three Harmony mines achieved One Million Fatality Free shifts.

Four Harmony mines achieved 500 000 Fatality Free shifts.

Improvements to Wau Health Centre in PNG completed.

Fatality injury rate (per million hours worked)

Harmony's South African operations reported a 27.0% decrease in the Fatality Injury Frequency Rate (FIFR) from 0.26 to 0.19

during the second quarter under review.

Harmony achieved its best safety results on record during the December quarter when three of our South African mines each

achieved One Million Fatality Free Shifts. Unisel, St Helena and Brand mines were the proud achievers. In addition, four other

South African mines, including Evander, Masimong, Doornkop and Bambanani, each achieved half a million fatality free shifts.

Notwithstanding this safety improvement, regretfully four employees lost their lives in separate incidents at the South African

operations.

Over the past quarter Harmony intensified its safety drive and the group saw marked reductions in Lost Time Injury Frequency

Rates (LTIFR) as well as Shifts Lost Frequency Rates (SLFR).

The LTIFR for the Australian operations is at 3.1 which is below the mining industry average of 4.2 and the Australian gold

industry average of 3.9. Unfortunately LTIs occurred at Mt Marion underground mine and at the Checker Treatment Plant in

Mt Magnet which brought to an end a 2.7-year LTI free period at Mt Marion and a seven-year LTI free period at Checker

Treatment Plant.

At the Wau Health Centre in PNG, work to improve the centre's condition and create a voluntary counselling and testing facility

for HIV/AIDS was completed. The initiative has engendered positive support from the community for Harmony.

P

THE SECOND QUARTER ENDED DECEMBER 2006 UNDER REVIEW

Tonnes Milled

The Group's South African underground operations delivered a stable performance in terms of tonnes milled, totalling 3 361Mt

(3 351Mt) for the December 2006 quarter.

Recovery Grades

Good grade performance was achieved at most of our operations, but Tshepong, Masimong and Evander all reported lower

recovery grades. Grades from the South African operations decreased by 4.4% to 4.8g/t (5.0g/t); surface mining grades

decreased by 7.9% and the grades from the Australian operations were also lower by 5.1%.

Cost Control

The Group's R/t costs were well contained at R372/t (R376/t), despite a significant increase in development. Gold production

was, however, lower due to a decrease in recovery grade, resulting in higher unit costs of R104 132/kg (R97 538/kg). Development

Harmony's programme to improve flexibility at its mines continued unabated. The lower development result for the Growth

assets (illustrated above) is due to a reduction from 4.4km to 3.2km made at Elandsrand due to a fraudulent over-measurement

in the previous quarter.

The performance of the company is best highlighted in the following table:

CAPITAL EXPENDITURE

During the Group's second quarter, total capital expenditure amounted to R571 million. This is R6 million lower than the

September quarter's R577 million.

All five of the Group's Growth projects continue to report good progress. This is despite the fact that Tshepong Sub 66 project

continued to encounter poor ground conditions, necessitating additional safety measures resulting in slower than planned

progress.

At Hidden Valley the resource definition drilling programme for Hamata started in October and initial results are encouraging.

Tshepong Mine
```

Tshepong's tonnes milled declined from last quarter's record levels by 8.4% to 420 683 tonnes (459 115 tonnes) quarter on

quarter due mainly to a 5.4% decrease in area mined and fewer milling shifts in December.

Average Mining Grade for the quarter was lower at 1 365 cmg/t (1 472 cmg/t) resulting in a 1g/t decrease of broken grade

which impacted negatively on recovered grade. Grade fell from 6.6g/t to 5.6g/t, resulting in a 15.4% drop in gold produced to

2 353.5kg (3 036.5kg).

Lower tonnes together with lower grades resulted in 34.9% higher cost per kilogram to R88 619/kg (R65 656/kg). Costs per

tonne increased by 14% to R496 (R434) due to tonnage targets not being achieved.

A disappointing quarter, but with real prospects that this operation should recover in the next quarter.

P

Target Mine

Target's tonnages milled declined by 9.6% to 189 400 tonnes (209 600 tonnes) for the quarter, after being affected by both

loader and dump-truck availability as well as the increased distances for tramming waste rock from development areas. Large

rocks in the older massive stopes which resulted in decreased loading rates and the need for significant secondary blasting,

further impacting on volumes.

Total unit costs increased by 80% to R72 581/kg (R40 350/kg) due to Target's high fixed costs and the lower volumes for the

quarter.

Grade decreased by 3.7% to 5.2g/t (5.4g/t) ascribed to a 15% dilution resulting from anomalies occurring in three massive

stopes mined in the quarter. One of the stopes is being mined between two backfilled stopes, the other is a pillar adjacent to

Nos. 1, 2, 6 and 7 stopes that has holed into the gathering drive above and the third is being mined below a destress cut which

collapsed into the massive stope. Excessive dilution and the inability to achieve the right mix impacted on grade.

Mining will

move to new stopes for the March quarter.

In addition to operational challenges, Target is also one of our operations faced with remuneration pressures to retain skilled staff.

Masimong Mine

Development at Masimong rose by 10.5%, reaching record levels in December. Tonnes milled decreased by 4.4% to 238 000 tonnes (249 000 tonnes), as a result of increased waste being trammed and hoisted due to higher development tonnages and yields fell by 14.8% to 4.4g/t (5.2g/t).

Working costs were well contained, but costs per kilogram were 23% higher R118 307 (R96 209). Mud loading and inadequate

control of water into the ore passes is affecting Masimong's grade. New plans and methods are being put in place and improvements should be evident in the next quarter.

Evander

Tonnes milled at Evander were 6.7% lower at 375 000 (402 000). Higher development rates and waste treated as reef, resulted

in a flat yield of 4.5g/t (4.6g/t) and higher unit costs of R115 082/kg (R106 724/kg).

Evander experienced ventilation problems and No. 7 shaft continues to be affected by the footwall sill that replaced the reef

in certain areas. However, the ledging in raises which had been delayed previously is progressing well and stores and overhead

costs were well contained.

Randfontein operations

At Randfontein tonnes milled decreased by 2% to 337 925 tonnes (344 865 tonnes). The drop in volumes is associated with a

reduction in channel widths for the December production month.

Flexibility remains a challenge, but volume improvements are anticipated for the next quarter due to significant improvements

in development metres.

Randfontein's significant cost saving of R10.4 million resulted in improved unit cost of R569/t (R587/t). Cash cost per kg was 4.5%

up to R101 972/kg (R97 619/kg) due to a lower grade of 5.6g/t (6.0g/t), resulting in a 18.9% reduction in quarterly contribution

to profits.

P 11

Leveraged operations

Shafts included under this section are Bambanani, Joel, West Shaft, St Helena, Harmony, Merriespruit, Unisel, Brand and Orkney.

21.2 Surface recovery grade (g/t)0.70 0.76 0.99 (7.9)Kilograms produced (kg) 770 692 926 11.3 Working costs (R/kg)79 000 95 750 89 849 17.5 Working costs (R/tonne) 55 73 89 24.7 Kalgold Tonnages at Kalgold were slightly lower than the previous quarter. The plant continued to operate at maximum throughput. Grade increased by 7.5%, offsetting cost increases of 3% when compared with the previous quarter. Tonnages from the pit remained low due to poor availability of key mining equipment resulting in two months' finishing the final cut-back. Despite the backlog of waste tonnage in D-Zone Pit, the lower grade from A-Zone Pit has continued to augment feed to the mill. **Project Phoenix** This project did well and was able to deliver R11 million in working profit. An additional R6 million capex was approved to increase capacity from 400 000 to 500 000 tonnes by upgrading the CIL tanks and the residue disposal system. Current quarter performance December 2006 Actual Tonnes treated (R'000)396 Recovered grade g/t 0.278 Kilograms recovered 110

(18.2)

The Australian operations generated an operating profit of A\$10.6 million, 37% down compared with A\$16.9 million in the

previous quarter, primarily due to a 7.8% decrease in gold production from 65 877oz in the September quarter to 60 707oz for

this quarter. The decrease in financial performance was primarily due to shortfalls in tonnage and grade under performance at

Hill 50 and St George underground mines at Mt Magnet.

During the quarter, 50 000 ounces of hedged forward positions were settled at a cost of A\$14.7 million. These out-of-the-

money hedge positions, inherited with the acquisition of Hill 50 Gold NL, had an average strike price of A\$518. The negative

marked-to-market valuation of the remaining hedge commitments at quarter-end amounted to A\$87.3 million, based on an

A\$ spot price of A\$801/oz. During the March quarter an additional 42 000 ounces of hedged positions will be settled. Closure

costs of these positions at current prices should amount to some A\$12 million.

Mount Magnet

Mt Magnet operations produced 35 242oz of gold (46 220oz) for December, from milling of 462 446 tonnes (435 885 tonnes).

This resulted in a lower cash operating profit of A\$5 million (A\$14 million), primarily due to shortfalls in tonnage and grade

performance at both underground mines. Capital expenditure amounted to A\$2.4 million for the quarter.

Underground production dropped to 19 643oz in the current quarter (32 181oz), from the milling of 110 635 underground

tonnes (151 184 tonnes) at 5.5g/t compared with 6.6g/t milled in the previous quarter. Open pit production increased significantly from 9 351oz in the September quarter to 14 279oz in the December quarter, from the milling of 307 372 tonnes

at 1.44g/t compared to 100 307 tonnes at 2.90g/t milled in the previous quarter.

Mt Magnet purchased the Western Queen South prospect from Dalgaranga JV (AXG Mining and Equigold). The acquisition will

provide 160 000 tonnes at 4.3g/t Au for 19 000 recovered ounces to the Mt Magnet open pit operations. The mine plan calls

for gold production from Western Queen South to commence in May 2007 and will continue until September 2007. Cash costs

are expected to be A\$560/oz.

P

South Kal Mines

During the December quarter, South Kal Mines produced 25 465oz of gold (19 664oz) from the milling of 314 722 tonnes of

ore at an average head grade of 2.52g/t. This resulted in an increased cash operating profit of A\$5.6 million compared with

A\$2.9 million in the previous quarter. Capital increased from A\$3.6 million to A\$5.1 million, predominantly as a result of the

HBJ open pit cutback capital project commencing and reaching planned activity levels.

Mill throughput was slightly less than the previous quarter due to mill availability being affected by repairs to one of the leach

tanks and several power outages caused by severe thunderstorms in the area. Throughput was also hampered by problems with

treating the clay rich Shirl Open Pit ore.

Gold recoveries through the Jubilee Process Plant have improved and increased production from Mt Marion underground mine

again resulted in increased high grade feed to the processing plant compared with the previous quarter.

Doornkop South Reef Capital Project

Project Overview

Further progress was made with station development on 202, 205, 207 and 212 levels with a total of 10 956 cubic metres

excavated. Access development continued on 192 and 197 levels with 567 metres excavated. On level 192, secondary development advanced by 198 metres.

Shaft sinking operations progressing well: the station on 192 level was cut and lined, 15 metres of the main shaft was sunk

below 192 level and the last portion of shaft to 197 level was removed by end January 2007. On level 212 where dual sinking

continued, 11.4 metres was cut below the loading station elevation with the remaining 17 metres blasted to shaft bottom by

end January 2007.

The updated schedule provides for the main shaft to be partially commissioned to 192 level by May 2007. Exploration drilling

started with the first three holes having been drilled.

P

Tshepong – Sub 66 Decline Project

Project Overview

Steady progress was made at Sub 66 Decline project despite extremely poor ground conditions being encountered at the lower

end of the decline.

These conditions necessitated extensive safety support for working areas. Steady but slower progress was made with development advancing 1 165.9 metres versus the planned 1 384.0 metres. The remaining 395 metres (12%) of the original

3 310 metres decline development should be completed in four and a half months. The project is 79% complete.

The holing of 69 - 95 raise line encountered high stress zone which required additional support and hence slowed down the

advance rates. Holing envisaged in February 2007.

The planned vent raisebore hole from 69 to 66 level, to alleviate ventilation constraints on 69 level, was delayed by one month

due to late delivery of equipment to site.

P

Phakisa Capital Project

Project Overview

Satisfactory progress is being made. Raise boring target dates were met and service water dam between 55 and 59 levels ahead of

schedule. Permanent air and water columns in shaft completed and all Pressure Reducing Valve stations should be commissioned

in the third quarter.

Late delivery of high pressure water pipes from suppliers has delayed the shaft infrastructure commissioning by one

and hampered the smooth development access start up. Access development started on 75, 73 and 71 levels, however, slow

progress was made due to new work crews and downtime of trackless equipment.

Good progress was made with infrastructure and completion date is set for March 2007.

Р

Elandsrand Capital Project

Project Overview

During the quarter the installation of pump column No. 2 from the station to the pump chamber was started in December

2006 and 92 level turbine dam reached its planned depth.

The centre raise-bore hole, linking the dam to 95 level, needs to be supported to ensure stability for life of mine. A hoisting

arrangement will be designed and built to accommodate drilling and gunniting operations in this 1.8 metre vertical hole.

Stripping out of the reef and waste conveyor belts on 100 level took place during the quarter. The commissioning of the

Man 1 Winder side of 113 and 115 level stations was done in October and November, respectively. Both Man-winders can now

service from 102 level down to 115 level.

109 level main sub-station was commissioned as well as the main electrical feeders between 109 and 113 levels. No. 1 settler

mechanicals and its launders will be constructed during February and March.

No. 3 service shaft hoist chamber was completed in December 2006. Drilling of the centre hole of No. 3 service shaft has not commence

as a ventilation cross-over has to be established before the shaft centre hole can hole into the fresh air cross-cut on 109 level.

Access Development

Access development at 109 and 113 levels have progressed well. An additional 57.3 metres was developed in the 109 Vent

cross-cut to reach the ventilation cross-over. Together with the haulage and return airway, the Nos. 8, 10 and 11 connecting

cross-cuts were developed at 113 level.

Project Phoenix

Project Overview

The H1 Monitoring installation at Project Phoenix, a retreatment project, was completed in mid-November. With the commissioning of the new system, reclamation tonnages increased from 74 000 tonnes per month to 214 000 tonnes per

month in the December quarter.

At Brand A, civil work was completed, installation of equipment as well as plant modification is progressing well.

While at

Brand D, preparation to recommission slimes dam is well-advanced and planned for end January.

P

Hidden Valley project Highlights

Excellent progress made with earthworks on platform for permanent camp, road to Hidden Valley and Pihema Creek road to Hamata Plant site

Geotechnical drilling at Hamata plant site completed

Resource definition drilling programmes were started at Hamata

US\$31 million fleet financing facility termsheet and supply and maintenance agreement signed

Approval received on customs and excise exemption during construction

Project Overview

Significant progress was made on the access road to the plant site from the Bulldog track and toward Hidden Valley. An area

south of Hamata Junction has been levelled for the site of the permanent camp and an area further south has been prepared

for heavy vehicle workshops.

Cost for the roads and earthworks for the quarter was A\$4 million which included costs associated with the capital purchase

of additional construction equipment.

A\$1.6 million resource definition drilling programme for Hamata started in October, with 1 660 metres of drilling and the

excavation of 20 trenches completed. The objective of the programme is to increase resource confidence, with the potential to

convert over 100 000oz of inferred resource into the measured and indicated category. Initial results are encouraging with

trenches confirming the continuity of mineralisation to surface and correlating well with the diamond drilling.

A resource definition drilling programme for Kaveroi received A\$6.9 million capex approval. The programme is targeting the

conversion in excess of 800 000oz of inferred resource into the measured and indicated category before the end of the financial

vear.

A contract worth US\$42 million for 45 pieces of mining equipment, consisting mainly of dump trucks, excavaters, dozers.

graders and drill rigs, was signed. The first two mining fleets were ordered and delivery is scheduled for May and June 2007.

Fleet financing

Harmony and Westpac Bank PNG Ltd signed a termsheet for a fleet financing facility for the Hidden Valley project during the

quarter. Financing consists of an US\$31 million facility to purchase the mining fleet with funding available for a period of five

years after delivery of the equipment under a lease agreement.

The facility will bear interest at Libor plus 1.25% until 95% of budgeted production is reached thereafter rate will decrease to

Libor plus 0.80%. A 15% deposit on all equipment ordered is payable, with the remaining portion funded by the lease agreement.

The facility is secured by the equipment.

Wafi/Golpu pre-feasibility studies

Project Overview

Geotechnical drilling programme for the Golpu copper/gold deposit was completed during November 2006. All core collected

was assayed and SRK has completed a geotechnical model. The updated block model, which is also required for the block caving

analysis, is nearing completion and early indications are that the ore body volume and grade reported in the previous resource

statement will be confirmed, with some potential for upside.

Drilling has confirmed the robustness of the porphyry core, in both tonnes and grade. This drilling shows the extent of the

stockwork mineralisation in the surrounding metasediments to be more continuous than previously modelled.

Resource

modelling is nearing completion.

Link Zone drilling commenced during the quarter with two holes completed. Preliminary results received for the first hole

drilled were excellent with 49m at 10.2g/t Au from 324m depth. This intercept will have a positive effect on the currently

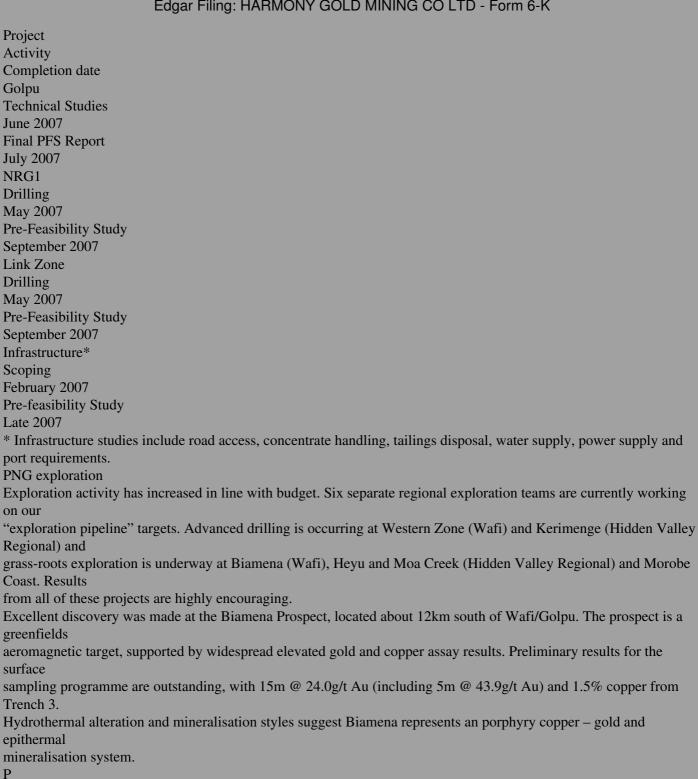

modelled Link Zone resource (Figure 1).

Total project expenditure for the quarter was 6.9 million Kina (A\$3.2 million). The increase in expenditure is due to increased

drilling performance and the resultant increase in study work.

Figure 1: Section 20150mN +- 12.5m comparing the intersection in the new hole (WR231) to the previous Link Zone model.

NOTES TO THE RESULTS FOR THE QUARTER ENDED 31 DECEMBER 2006 (unaudited)

1.

Basis of accounting

The unaudited results for the quarter have been prepared using accounting policies that comply with International Financial Reporting Standards (IFRS). These consolidated quarterly statements are prepared in accordance with IFRS 34,

Interim Financial Reporting. The accounting policies are consistent with those applied in the previous financial year.

Commodity contracts

The Harmony Group's outstanding commodity contracts against future production, by type at 31 December 2006 are indicated below. The total net delta of the hedge book at 31 December 2006 was 229 636oz (7 143kg).

99 718

229 636

** The Delta of the hedge position indicated above, is the equivalent gold position that would have the same marked-to-

market sensitivity for a small change in the gold price.

These contracts are classified as speculative and the marked-to-market movement is reflected in the income statement. The marked-to-market movement for the quarter of these contracts was a positive R100.5 million (positive US\$13.7 million) at 31 December 2006 (at 30 September 2006: positive R73 million or positive US\$10 million). Harmony closed out a further 62 000oz of forward positions during the quarter. 20 000oz of these closed positions, together with 30 000oz of closed positions from last quarter were settled during the quarter ended 31 December 2006 at

a cost of R82.9 million (US\$11.8 million). The additional 42 000oz closed out during the quarter will be settled during the

next quarter ending 31 March 2007. During the quarter ended 30 September 2006, Harmony settled 25 000oz of the forward contracts at a cost of R41 million (US\$5.8 million).

The marked-to-market value of the hedge book was a negative A\$87.3 million on 31 December 2006 (at 30 September

2006: negative A\$105.1 million). The values at 31 December 2006 were based on a gold price of US\$634 (A\$801) per ounce, exchange rates of US\$1/R7.0375 and A\$1/US\$0.79 and prevailing market interest rates and volatilities at that date.

These valuations were provided by independent risk and treasury management experts.

At 24 January 2007, the marked-to-market value of the hedge book was a negative A\$91.6 million (negative US\$71.6 million), based on a gold price of US\$643 (A\$822) per ounce, exchange rate of A\$1/US\$0.78 and prevailing market interest rates at that time.

These marked-to-market valuations are not predictive of the future value of the hedge position, nor of the future impact

on the revenue of the company. The valuation represents the cost of buying all hedge contracts at the time of the valuation, at market prices and rates available at the time.

FORWARD-LOOKING STATEMENTS

This quarterly report contains forward-looking statements within the meaning of the United States Private Securities Litigation Reform Act of 1995 with respect to Harmony's financial condition, results of operations, business strategies, operating efficiencies, competitive positions, growth opportunities for existing services, plans and objectives of management, markets for stock and other matters. Statements in this quarterly report that are not historical facts are "forward-looking statements" for the purpose of the safe harbor provided by Section 21E of the U.S. Securities Exchange Act of 1934, as amended, and Section 27A of the U.S. Securities Act of 1933, as amended. Forward-looking

statements are statements that are not historical facts. These statements include financial projections and estimates and their underlying assumptions, statements regarding plans, objectives and expectations with respect to future operations, products and services, and statements regarding future performance. Forward-looking statements are generally identified by the words "expect," "anticipates," "believes," "intends," "estimates" and similar expressions. These statements are only predictions. All forward-looking statements involve a number of risks, uncertainties and other factors and we cannot assure you that such statements will prove to be correct. Risks, uncertainties and other factors could cause actual events or results to differ from those expressed or implied by the forward-looking statements. These forward-looking statements, including, among others, those relating to the future business prospects, revenues and income of Harmony, wherever they may occur in this quarterly report and the exhibits to this quarterly report, are necessarily estimates reflecting the best judgment of the senior management of Harmony and involve a number of risks and uncertainties that could cause actual results to differ materially from those suggested by the forward-looking statements. As a consequence, these forward-looking statements should be considered in light of various important factors, including those set forth in this quarterly report. Important factors that could cause actual results to differ materially from estimates or projections contained in the forward-looking statements include, without limitation:

- overall economic and business conditions in South Africa and elsewhere;
- the ability to achieve anticipated efficiencies and other cost savings in connection with past and future acquisitions;
- decreases in the market price of gold;
- the occurrence of hazards associated with underground and surface gold mining;
- the occurrence of labor disruptions;
- availability, terms and deployment of capital;
- changes in Government regulation, particularly mining rights and environmental regulation;
- fluctuations in exchange rates;
- currency devaluations and other macro-economic monetary policies; and
- socio-economic instability in South Africa and regionally.
