(1) *Available seat kilometers* represents the aircraft seating capacity multiplied by the number of kilometers the seats are flown.

(3) *Load factor* represents the percentage of aircraft seating capacity that is actually utilized (calculated by dividing revenue passenger kilometers by available seat kilometers).

Also, the Company has updated its guidance to account for a higher productivity and stage length on planned capacity increases, reduced load factors due to the decrease in passenger volumes caused by external factors including air traffic control that are expected to be resolved in the near term, lower yields related to lower load factors, an increased stage length, and the launch of approximately 120 new daily flights and three new destinations during the quarter. GOL's operating fleet is currently composed of 62 Boeing 737 aircraft.
