CVRD increases supply of iron ore fines

Rio de Janeiro, March 27, 2006 Companhia Vale do Rio Doce (CVRD) informs that the operation of its São Luis pellet plant, in the state of Maranhão, northern Brazil, was temporarily stopped.

The temporary stoppage of São Luis allows to anticipate its maintenance and to reallocate the volume of iron ore fines which should be dedicated to pellet-making to be shipped directly to clients, meeting at least partially their strong demand for iron ore fines.

Simultaneously to a persistent global excess demand for iron ore fines and lumps, which expansion continues to be mainly driven by China, the seaborne demand for pellets, which is more concentrated in North America and the European Union, has softened. The current level of inventories and the growing production of CVRD pellet plant in the Southern System will guarantee its supply to clients until São Luís resumes operation.

This press release may contain statements that express management's expectations about future events or results rather than historical facts. These forward-looking statements involve risks and uncertainties that could cause actual results to differ materially from those projected in forward-looking statements, and CVRD cannot give assurance that such statements will prove correct. These risks and uncertainties include factors: relating to the Brazilian economy and securities markets, which exhibit volatility and can be adversely affected by developments in other countries; relating to the iron ore business and its dependence on the global steel industry, which is cyclical in nature; and relating to the highly competitive industries in which CVRD operates. For additional information on factors that could cause CVRD's actual results to differ from expectations reflected in forward-looking statements, please see CVRD's reports filed with the Brazilian Comissão de Valores Mobiliários and the U.S. Securities and Exchange Commission.
