(Title of Class)

Indicate the number of outstanding shares of each of the issuer's classes of capital or common stock as of the close of the period covered by the Annual Report.

As of December 31, 2006, the Registrant had outstanding 68,763,561 ordinary shares, par value \$0.05 per share.

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act.

Yes No

If the report is an annual or transition report, indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or 15(d) of the Securities Exchange Act of 1934.

Yes No

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days.

Yes No

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, or a non-accelerated filer. See definition of "accelerated filer and large accelerated filer" in Rule 12b-2 of the Exchange Act. (Check one):

Large accelerated filer Accelerated filer Non-accelerated filer

Indicate by check mark which financial statement item the registrant has elected to follow. Item
17 Item 18

If this is an annual report, indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).

Yes No

GLOSSARY OF MINING TECHNICAL TERMS

The following explanations are not intended as technical definitions, but rather are intended to assist the reader in understanding some of the terms as used in this Annual Report.

Aureole: A zone of altered country rock around an igneous intrusion.

bcm:

	Bank cubic meter, a volumetric mining measure, equivalent to a cubic meter.
Birimian:	Geological time era, about 2.1 billion years ago.
Carbonate:	A mineral salt typically found in quartz veins and as a product of hydrothermal alteration of sedimentary rock.
Clastic:	Rocks built up of fragments of pre-existing rocks which have been produced by the processes of weathering and erosion.
Cut-off grade:	The lowest grade of material that can be mined and processed considering all applicable costs, without incurring a loss or gaining a profit.
Development:	Activities required to prepare for mining activities and maintain a planned production level.
Dilution:	Mixing of ore grade material with non-ore grade/waste material in the mining process.
Discordant:	Structurally unconformable.
Disseminated:	A term used to describe fine particles of ore or other minerals dispersed through the enclosing rock.
Dyke:	A sheet-like body of igneous rock which is discordant to bedding or foliation.
EEP:	Exclusive exploration permit.
EP:	Exploration permit.
Exploration:	Activities associated with ascertaining the existence, location, extent or quality of mineralized material, including economic and technical evaluations of mineralized material.
Fault:	A fracture or a zone of fractures within a body of rock.
Feldspar:	An alumino-silicate mineral.
Fold:	A flexure of planar structures within the rocks.
Foliation:	A term used to describe planar arrangements of minerals or mineral bands within rocks.

ii

Table of Contents

Footwall:	The underlying side of a fault, orebody or stope.
Fragmentation:	The breakage of rock during blasting in which explosive energy fractures the solid mass into pieces; the distribution of rock particle sizes after blasting.
g/t:	Gram of gold per metric tonne.
Gabbro:	A dark granular igneous rock composed essentially of labradorite and augite.
Gold reserves:	The gold contained within proven and probable reserves on the basis of recoverable material (reported as mill delivered tonnes and head grade).
Gold sales:	

	<p>Represents the sales of gold at spot and the gains/losses on hedge contracts which have been delivered into at the designated maturity date. It excludes gains/losses which have been rolled forward to match future sales. This adjustment is considered appropriate because no cash is received/paid in respect of such contracts.</p>
Grade:	<p>The quantity of metal per unit mass of ore expressed as a percentage or, for gold, as grams of gold per tonne of ore.</p>
Greenstone:	<p>A field term used to describe any weakly metamorphosed rock.</p>
Greywacke:	<p>A dark gray, coarse grained, indurated sedimentary rock consisting essentially of quartz, feldspar, and fragments of other rock types.</p>
Head grade:	<p>The grade of the ore as delivered to the metallurgical plant.</p>
Hydrothermal:	<p>Pertaining to the action of hot aqueous solutions on rocks.</p>
Igneous:	<p>A rock or mineral that solidified from molten or partially molten material.</p>
In situ:	<p>In place or within unbroken rock or still in the ground.</p>
Kriging:	<p>An interpolation method that minimizes the estimation error in the determination of reserves.</p>
Landsat:	<p>Spectral images of the Earth's surface.</p>
